EFFICIENT LEARNING So You Can Enjoy Life & Have More Fun!

Written by Ashish Goyal, MD

www.PediatricsBoardReview.com
INTRODUCTION TO THE PBR EXPERIENCE! (Please Read This!!!)

Hi! My name is Ashish Goyal and I’m the author. Since creating PBR, I’ve been fortunate enough to help thousands of pediatricians with their board review experience through the “PBR.” I’m a double-boarded physician living on the most isolated landmass in the world, yet my greatest success stories come for pediatricians across the United States.

The cornerstone idea within the PBR Certification System is the idea of having concise and easy-to-understand information offered in hardcopy and digital resources to facilitate multimodal learning. In other words, we give you exactly the information that you need to pass, but we do it in a way that limits your overwhelm, increases your efficiency and provides multiple ways of reviewing the information. After all, multimodal studying has been shown to increase learning.

The results have been humbling. My favorite stories are those from pediatricians who had previously failed 4–9 times before they found the PBR, but then passed by using the PBR Certification System. Those wonderful success stories clearly show that the PBR system is perfect for first-time test-takers, AND we are the leaders in helping repeat test-takers finally pass.

Along with the Core Study Guide and the Q&A book, the digital, audio and video resources help you cement the core material through a multimodal learning experience. Since the content within our various resources is virtually always presented in the same order, your efforts will be streamlined and maximized so that you stay EFFICIENT (and happier).

PBR is great for residents looking to boost their In-Training Exams (ITE), for new pediatricians taking their American Board of Pediatrics (ABP) initial certification exam for the first time, for pediatricians who have failed the initial certification exam, for busy pediatricians studying for their traditional 4-hour ABP Maintenance of Certification (MOC) exam, for pediatricians going through the MOCA-Peds assessment, and for anyone in need of over 200 CME/MOC credits!

PBR is much more than a collection of study resources. It’s a group experience and a system. Our goal is to provide you with ALL of the CONTENT, test-taking TECHNIQUE, GUIDANCE, and COMMUNITY SUPPORT that you need to pass your exam. As many of our alumni have demonstrated, you truly do NOT need any other board review book to pass your exam.

The national first-time pass rate is usually in the 81%–89% range for the (ABP) initial certification exam. By analyzing surveys, PBR’s Money Back First-Time Pass Guarantee requests, and emails, we estimate that PBR’s first-time pass rate for the initial certification exams is at least 98%!

For the ABP MOC recertification exam, we have had multiple years of 100% first-time pass rates, and to date, we’ve NEVER had a Money Back Guarantee request from our MOCA-PBR Study Guide & Test Companion members.

In summary, Team PBR and I are here to provide you with exactly what you need to get board certified, and then remain board certified. We enjoy what we do and hope that if you need anything to help you succeed that you’ll reach out to us for help.

Best,

Ashish & Team PBR
WHY DOES THE **PBR CERTIFICATION SYSTEM WORK?**

**EFFICIENCY THROUGH SYSTEMS AND INNOVATION**

Most board review books and courses simply hand you a book and say, “good luck.” That’s how I studied for the USMLE exams, the pediatric board exam (twice) and the internal medicine board exam. I was **completely isolated!** After purchasing thousands of dollars of board materials, I was left to go through the books and video courses with no real guidance, no feedback from my peers, and absolutely no advice from the authors (besides a one-page preface).

Because of how excruciatingly painful that was, I’ve created a community of pediatricians for you to study with and a blueprint of what to study, how to study it and how to do so **EFFICIENTLY!**

In fact, **ALL of the PBR resources are created with your time in mind.**

- Will the resource be **easy to use?**
- Will it provide **more value** than existing resources AND provide that value in a **more streamlined** fashion?
- Can we make the resource **easily accessible via smartphones and tablets?**
- Will the resource **reinforce the core concepts** laid out in the PBR and in the Q&A book **instead of overwhelming** you with new concepts?
- Can we make the resource **portable** (e.g., audio or video?) so that it can be used at times when a physician, or a mom, or a dad, or a gym-enthusiast, would not normally be able to study?
- Can we teach you how to **become a better studier** and maximize your time in front of the books through **Deep Study?**
- Can we assist by creating Personalized Schedules for you that **map out your study time?**
- Can we help you **become a better test-taker** through courses on test-taking strategy?

**PBR is a system** unlike anything you have ever experience before in your medical career. The Core Study Guide is written in easy-to-understand language and provides you with hundreds of time-saving memory aids. The online systems allow for one-click access to hundreds of high-yield images across the web. The Q&A book has some of the highest yield and most board-relevant questions available.

You also have a ready-made study group of hundreds of pediatricians. It’s called the PBR Facebook CREW, and it will help you **EFFICIENTLY blow past trouble spots in your studying.** Plus, if you see an error in the book, or if you would like to submit an official request for content clarification, you can simply submit the info to me through **PBR’s error submission portal** ([www.pediatricsboardreview.com/error](http://www.pediatricsboardreview.com/error)). Your submissions will likely be used to create a PDF response that is made available to ALL PBR members in order to enhance the PBR experience for the entire PBR community.

All of these efficiency-focused systems **SAVE YOU OVER 100 HOURS OF TIME** and give you **flexibility in your life to enjoy your family, your friends, or to reinvest that time** into repetition of the PBR material.

A critical component of ANY individualized board review plan is to go through the study material **MULTIPLE times.** **PBR is concise, makes the learning manageable,** and will allow you to **feel confident on your test day** because of well-prepared you are for your exam.
WHAT IS THE BEST BUNDLE FOR ME?

→ PGY1 – PGY2 (IN-TRAINING EXAM PREPARATION)
Your main goal should be exposure to board-relevant content. I recommend that you either get the Ultimate Bundle Pack + MP3 Bundle or the ALL ACCESS PASS. If you want to sign up for multiple years to ensure access through the date of your exam, email us to get a big discount. For group discounts, visit www.pbrlinks.com/GROUPS.

→ INITIAL CERTIFICATION EXAM PREPARATION (PGY3 & HIGHER)
In general, the NO BRAINER is the best bundle and the one that most initial certification exam takers enroll into. You will get everything you need to develop your fund of knowledge while also learning test-taking strategies through our introductory Online Test-Taking Strategies Course. You will also get up to three 90-Day Personalized Study Schedules created for you by Team PBR.

For LOW-RISK test-takers, the ALL ACCESS PASS is also a very good option. It focuses on a multimodal learning experience to develop your fund of knowledge and gives you access to our ASK THE EXPERT live webinars and online question portals. This bundle does not focus on test-taking strategy, and it only offers one 90-Day Personalized Schedule. The assumption is that you tend to do very well on exams and with time management.

For MODERATE-RISK test-takers, the NO BRAINER is definitely the right choice. It includes the All Access Pass, the Online Test-Taking Strategies Course and it also offers up to three Personalized Study Schedules created by Team PBR.

For HIGH-RISK test-takers, the VIP BUNDLE is the right choice. It includes the No Brainer and a seat in one of our Live Test-Taking Strategies & Deep Study Courses. The live course helps you with advanced test-taking strategies and allows you to break through the plateau that you will reach if you only use our Online Test-Taking Strategies Course. The Deep Study lectures are often called “life changing,” and they help you become a MUCH better manager of your time, energy and focus. The VIP BUNDLE also includes Group Deep Dive calls to help you understand PBR’s best practices and to help you break through barriers during your board prep.

→ MOCA-PEDS ASSESSMENT QUESTIONS
While the PBR Core Study Guide and Q&A Book are good supportive resources, you do not need them. We have a very inexpensive MOCA-PBR Study Guide & Test Companion that is specifically created to help you pass your quarterly questions. Every year, we create 1-page topic summaries to cover ALL of the ABP Learning Objectives and Featured Readings for General Pediatrics. If we do our job right, you will pass without needing to study anything else!

→ MOC EXAM (4-HOUR, PROCTORED RECERTIFICATION EXAM)
This is a smaller, easier version of the initial certification exam. For most board-certified pediatricians, the Ultimate Bundle Pack + MP3 Bundle or the ALL ACCESS PASS are sufficient. If you are someone who has struggled with standardized exams in the past, then you should enroll into the NO BRAINER bundle.

Still not sure? Contact us and we’ll guide you further!
WHAT ARE THE 7+ RESOURCES THAT YOU HAVE ACCESS TO?

The **ALL ACCESS PASS** and the **NO BRAINER** are by far the most popular memberships for anyone taking the initial certification board exam. If you have one of these, please make sure you take advantage of **all** of these resources!

1. **PBR’S COMMUNITY!** This includes the **MEMBERS-ONLY FACEBOOK CREW**, Ashish Goyal, “Team PBR” and PBR’s summertime webinar content experts. **JOIN THE CREW! Do not study in isolation!**
   You have a community of pediatricians to support you. MANY members say this is one of the **most valuable components of the PBR system**. Studying for a board exam can be GRUELING, but having others to lean on for clarification, advice or just some moral support can make all the difference in your studying experience.
Visit the following link to read more: www.pediatricsboardreview.com/facebook

2. **HARDCOPY PBR CORE STUDY GUIDE**: YOU WILL LEARN TO LOVE YOUR “PBR!” It is at the center of your success blueprint. Carry it everywhere, highlight it, draw pictures, create mnemonics and add notes to help you cement the 2000 MUST-KNOW topics in this book. After your exam, I promise you that you will MISS IT!

3. **HARDCOPY PBR Q&A BOOK**: KNOW this book! It is NOT a random collection of questions. The material should be considered CORE material for you to study over and over again. Carry it around and mark it up! Make sure you review this book as many times as you review the Core Study Guide.
4. **ONLINE VERSIONS OF THE PBR CORE STUDY GUIDE:** All 2000 topics are available in a scrolling PDF style format and in a topic-by-topic, searchable format. Keep this open and use the one-click image links while you study or after each two-hour block of studying. It's iPhone/smartphone compatible, iPad/tablet compatible and desktop compatible.

5. **ONLINE VERSION OF THE PBR Q&A BOOK:** Have a few minutes while at work? Open the scrolling PDF version of the Q&A book and go through one or two questions.

6. **PBR WEBSITE:** The website has a TREMENDOUS amount of valuable content. Each article was written to help address a need expressed by pediatricians. Read as many of the articles as you can! There is also a TOOLS section where you can find links to discounted pediatric board review question banks.

7. **PBR’S TEST-TAKING STRATEGIES:** Physicians are not taught HOW to take tests. **GOOD pediatricians with sound clinical reasoning WRONGLY believe that** a board exam is a measure of one’s knowledge base, and thus a measure of one’s abilities as a clinician. That is completely false. Exams require mastery of the English language, mastery of pacing, mastery of your emotional state during an exam, and an understanding of the deceptive tactics employed by question-writers to create seemingly possible yet blatantly WRONG answer choices.

PBR’s **ONLINE TEST-TAKING STRATEGIES & COACHING COURSE** (included in the No Brainer bundle) offers insights into this “board game.” You will stop viewing question as miniature patients and start viewing them as miniature riddles. Riddles with concrete rules and strategies to help you reach the correct answer quickly **(even when you often lack the clinical knowledge!)**. Understanding the rules of the game will completely change your outlook on how to prepare for the exam and how to use board review questions for PRACTICE instead of content. **I HIGHLY recommend the PBR Test-Taking Strategies & Coaching Course for anyone who is taking the boards, but especially for those who are “at risk.”** This includes you if:

- You have failed this exam at least once
- You typically score below the national average on your board exam scores
- You have failed ANY USMLE Step exam
- You were classified as “at risk” during residency based on your in-training exam scores
- You are more than 1 year out of residency

The course helps you understand the techniques and skills associated with answering board-style questions correctly. **We’ve helped MANY pediatricians finally pass the boards after failing FOUR, FIVE, SIX, SEVEN, and NINE times.** So, helping you should be easy.

To get just a taste of how you can increase your board scores immediately, and to learn a few of the rules to the “board game,” click here and read a PBR article I wrote titled, **“3 Strategies to Skyrocket Your Score!”** - [www.pediatricsboardreview.com/techniques](http://www.pediatricsboardreview.com/techniques)

Also, visit [www.pediatricsboardreview.com/strategy](http://www.pediatricsboardreview.com/strategy) and watch a FREE test-taking strategies session right now.
TEST-TAKING STRATEGY COURSE MEMBER TESTIMONIALS
(FROM MEMBERS OF OUR ONLINE COURSE AND/OR OUR LIVE COURSE)

Ashish, I did it. I can't thank you enough for creating an amazing system to keep me on track with my studying. And the $2000 for the live weekend test taking course was well worth it. Doing the technique during the test kept me focused and allowed me to eliminate wrong answers. Thank you for all the great advice, sticking to the material, memorize, memorize, memorize then practice practice practice. After 4 failed attempts, it was exhilarating to finally read the words, “we are PLEASED to announce you PASSED!” I will definitely recommend your program. God Bless

- Dr. Yessenia Castro-Caballero, Board Certified Pediatrician

I believe I broke the record taking this test 10 times!!!! I finally passed on the 10th... I appreciate sincerely all your help, I have cried cried all day today, after too many years and thousands of dollars spent, finally this is in the past now. Thank you so much.

- Dr. Pablo Chagoya

I PASSED finally!!!!!!!!!!! So relieved and it's all because of you!! I would not have done it without the live courses... Thank you Ashish!!! You are the best!!

Frannie
Your devoted PBR fan :)

- Dr. Frances Liu, Board-Certified Pediatrician who increased her score by 18 points after failing 3 times

Definitely helped to get a better understanding of the "board game" that Ashish mentions. I'm sure I've fallen prey to those traps in the past.

Also, knowing the types of questions and the algorithm to figuring out how to spend my time answering the questions-- never would have thought about the Hybrid approach to just reading the last line of the vignette for "this/these" questions.

Really didn’t know that I shouldn’t be spending time reading through the whole vignette... or doing the "top to bottom" approach!

Overall it was great and I really appreciate you taking the time and effort putting this together and making sure that we can succeed our first time around.

Helped immensely with reading/understanding the “English” of the questions - I actually would’ve gotten one example question wrong in the past had I not used the AaCNI mnemonic

- Dr. Darlene Melk, Board Certified Pediatrician

I had very little time to prepare for the boards... The core study guide helped me focus on topics that were high yield on the exam. In addition, the strategies taught by Ashish were very helpful and is what I believe helped me PASS. I would highly recommend the PBR for anyone needed to review in a short period of time. It is worth every penny!

- Dr. Darlene Melk, Board Certified Pediatrician
Ashish, this is Russ Zwiener... The weight of the world has been lifted! I have PASSED the 2018 ABP certifying exam. I improved my score by 42 points and passed by 35. Tears of joy are wonderful. No Thank you could ever be sufficient for all the support and guidance over the past couple of years. Thank you again and please let me know if I could ever help with PBR in any way!!

3 Prior failed attempts

The first time, I didn’t finish... I landed a 166. The next year I joined PBR and went over the book 3 times. I should’ve taken off two weeks prior, but only managed one. I earned a 179. Heart breaking. But how could I give up when I only needed one point. So this year I went over the book at least 5 more times. I did the ATL live test-taking strategies training and learned how to process through choosing the most correct answers. I arranged to have at least 3 hrs of deep work everyday and did a chapter a day plus prep questions from that section. Two mos before the exam I did med study practice blocks of 84 questions timed to practice randomized subjects. This time I got a 208... The tears of relief...really I can’t describe it as intensely as we felt it. So much time, work, money, defeat I had felt...finally redeemed. The sacrifice my family made, finally we could leave purgatory and move on! ... Thank you PBR.

Ashish and Team. Today is the best day ever. I had to do many things to get here. You gave me the tools, and my confidence back. The test taking strategies changed my approach to questions. It was clear, consistent and concise. I approached each question the same way. It took me 10 years to figure out how to take this test. The personalized schedule kept me focused and on task. You helped me overcome my biggest challenge in my career. I passed with a 192. I am finally board certified after 10 years and I now have more options available to me. I can keep my family together. I have conquered my biggest nemesis and it feels great! You are awesome.

DID YOU KNOW THAT I FAILED THE BOARDS?

I took the ABP initial certification exam the year that I graduated from residency. I used multiple study guides to prepare. Because there was so much information in front of me (print and video), I only got through everything once.

I felt okay going into the exam. I thought, “I’ve been through the MCAT, three USMLE exams and an Internal Medicine board exam. I did fine in residency, and I studied really hard for two months. I’m sure I’ll be fine.”

Coming out of that exam room on test-day, I felt nauseous. I realized that I might have just failed my first medical board exam, ever! I was upset with myself for getting so scattered with all of those different study materials, but I was also annoyed because I still couldn’t think of a single resource that I could use as a primary study guide the next time around.

I went home and made notes about how I would study differently if I had failed. What topics would I concentrate on? What topics just don’t seem to be “testable”? What information is a waste of time to study?

When the results finally came, I failed. I estimate that I failed by seven to nine questions. I made key strategy changes based on my previous experience. I studied for hundreds of hours while still working a full-time job. I focused on efficiency, solid mnemonics for memorization and I stopped trying to learn “all of pediatrics.”

You never feel “great” coming out of a board exam, but the second time around I felt like I had a fighting chance. My score increased by 160 points and I estimated a pass by about 37–39 questions! Pretty soon, I even received another kind of letter from the ABP. The American Board of Pediatrics asked ME to write questions for the boards!!!

I was really just happy to pass. Failing the first time had cost me extra time, money and energy that I would have preferred to spend with my loved ones.

Prior to creating the Pediatrics Board Review experience, I was ashamed that I had failed. Now, I’ve taken a horrible experience and I’ve created something that is helping residents and pediatrician across the country. I’ve also realized that failing the boards did not mean that I was a bad pediatrician. Nor did passing by such a wide margin mean that I am a great pediatrician.

I'M JUST AN AVERAGE PERSON WHO DID EXTREMELY WELL ON THE EXAM... AND THEN TOOK MY NOTES AND SYSTEMS AND TURNED THEM INTO THE PBR. No matter who you are, I know that you can pass your exam too. That’s why the PBR materials come with a 100% money-back first-time pass guarantee.

It’s the most EFFICIENT and well-integrated Certification SYSTEM to help you PASS the pediatric boards. So, rest assured that by joining the PBR family, you’re already on the right track to success.

JUST FOLLOW THE EFFICIENCY BLUEPRINT!
THE PBR EFFICIENCY BLUEPRINT

The pediatric initial certification exam has one of the highest failure rates of any medical board exam. I urge you to follow just a few of my simple but critical recommendations as you go through your board review experience. Especially #1!

1. **Please stick to one primary study guide - the PBR!** Spreading yourself too thin by reviewing multiple resources is the **biggest mistake** you can make. I've gone through thousands of emails, interviews, and surveys. It's clear that this one, single recommendation that will increase your chances of board success more than anything else I can say.

   This is a key similarity amongst pediatricians who failed the boards, but then went on to pass using the PBR system. So please do not spend your time going through other books, video courses or expensive live board review courses. Go through the PBR books (Core Study Guide + Q&A Book) and the PBR companion products (videos, MP3s, digital picture atlas, webinars) exclusively and give yourself a seamless, multimodal approach.

2. Approach your PBR material by first simply seeing all of the PBR content in the Core Study Guide and Q&A Book. Spend about 60–90 seconds per page to simply see everything that you will need to learn so that you have an idea about the type of knowledge you'll need to acquire in order to pass this exam. This should take you a full day. Do not spend time writing notes of any kind during this process. Do not treat the Q&A Book like other questions. This is core content.

   During your first official read through, leave no stone unturned. Crosscheck anything that confuses you. Create mnemonics, notes, and drawings in the margins so that you understand everything. Make sure that you will never have to go outside of the PBR for additional knowledge or clarifications again. If you get stuck on a concept, reach out to your peers on the PBR Facebook Crew ([www.pediatricsboardreview.com/facebook](http://www.pediatricsboardreview.com/facebook))! If you think you've found an error, notify us through our special error submission link ([www.pediatricsboardreview.com/error](http://www.pediatricsboardreview.com/error)). This will help you maintain your pace and promote efficiency! When crosschecking, only go outside of PBR for possible errors or confusion. That's it! Do not go down the black hole of Google!

   Your second time should be much faster. Do not let your curiosity of non-PBR topics distract you. As you break up your studying time with questions, you will want to look up new topics and crosscheck facts between the PBR and PREP®. Do not do it! It's a guaranteed waste of precious time that could be spent on PBR, the highest yield resource that you will have at your disposal to pass the board exam.

   Your third, fourth, and fifth times through the PBR content should strictly focus on adding more information into your long-term memory through repetition, through the use of mnemonics, and through the use of multimodal studying. Use audio, video, webinars, study buddy sessions, flash cards, etc. Just use something to mix things up because it's been proven to increase learning!

   Again, you must resist that urge to look up extraneous information and you must focus on quality study time. Ensure that your reading is focused on learning and remembering the concepts. Do not simply read for the sake of reading, and do not study when you're exhausted or irritable.

   Your primary goal is to pass the exam. As long as you know everything from the Core Study Guide + Q&A Book, you will have enough information in your brain to easily pass. However, if you try to learn “all of pediatrics” you will get overwhelmed and probably fail the exam. Map out at least 300 hours of studying for the initial certification exam (I studied 400+ hours.)

3. Use PBR's Q&A book as more core material. Also use it to get familiar with very high-yield topics and questions. The format is short and to the point without too much extra information. The
questions will help you understand what types of key findings you need to identify on your practice questions and on your exam. Please remember that the Q&A book is considered CORE CONTENT. You need to KNOW IT COLD! Do NOT treat the PBR questions like PREP® questions.

4. Go through at least 1000 practice questions. Don’t go through them all at once (much more on this in the schedule outlines below). As you go through the questions, work on your timing. If you can average about 1 minute and 15 seconds per question, you will be fine for the boards. Do not try to understand why every single incorrect answer is wrong. Just focus on the correct answer, and if your answer is wrong, figure out WHY it’s wrong. Skip explanations about all of the other answer choices.

When evaluating WHY you answered a question wrong, figure out if it was because of a CONTENT problem or if it was due to a TECHNIQUE problem. If you’re not sure, then it’s a TECHNIQUE problem and you must get help – www.pediatricsboardreview.com/strategies.

Did you answer a question incorrectly because of a CONTENT issue? Meaning, you had a knowledge deficiency? If so, was the content in the PBR? If the answer is “yes” then you MUST know that information. If the answer is “no” then do NOT worry about it! Do NOT start looking at Nelson’s, Harriet Lane, Google, etc. It’s a black hole that you must avoid because it will only overwhelm you, and it will keep you from the two main goals of knowing the PBR CONTENT COLD and PRACTICING tons of questions to master your test-taking technique!

Remember, the AAP writes PREP®, the ABP writes the boards. Going through three to four years of PREP® is great, but keep in mind that the resource is great for CME. Any single year of PREP® questions is not designed to be a stand-alone study guide for the ABP. The questions are EXCELLENT for practicing and mastering your test-taking technique, but your highest-yield information will come from the PBR study guides and systems. If you need MORE practice questions, you can get discounted practice questions by visiting www.pediatricsboardreview.com/tools.

Did you answer a question incorrectly because of a TECHNIQUE issue? Did you add extra information and assumptions to the question or the answers that led you to the wrong answer? Did you spend too much time on a question even though it was clear that you didn’t have the knowledge to answer it? Did the question-writer trick you with a distractor? Did the question writer trick you with an English question instead of a clinical question? Did you get anxious or nervous under a timed mock exam? Did you often get stuck between seemingly similar answer choices? Are you still confused about why the answer you chose is wrong?

Make notes about the kinds of issues you’re having and try to figure out solution and strategies to avoid similar pitfalls in the future. If you notice that TECHNIQUES-BASED PROBLEMS creeping in over and over again, you need to seek out help through the PBR Test-Taking Strategies & Coaching course – www.pediatricsboardreview.com/strategies.

5. EXTREMELY Important Test Day Tips: PLAN to be successful. You will find two links below. The first breaks down the number of questions, time per block, etc. The second is a list of excellent PBR articles.

www.pediatricsboardreview.com/examday
www.pediatricsboardreview.com/category/test-day-tips
WE’VE GOT YOU TAKEN CARE OF!

We have a TON of guidance on how you can schedule your study time. Since PBR is of benefit to pediatricians at all different levels, I’ve tailored my recommendations accordingly below.

EVERYONE MUST recognize the difference between clinical practice and what the ABP would want you to do on the exam. The exam is filled with answer choices that sound like they would be great options in practice, but unless you know what “the book” says, you will have to simply roll the dice.

For anyone taking the Initial Certification exam, recognize that the pass rates are DRAMATICALLY LOWER than the USMLE Step Exams. **In 2021, the first-time pass rate for US and Canadian medical students taking the USMLE Step 1 was approximately 96% while the pass rate for the ABP initial certification exam was only 81%!** Our members’ pass rate for first-time test takers of the ABP exams is estimated to be > 98%! So, stay focused on PBR!

* ARE YOU A RESIDENT? Simply familiarizing yourself with everything in the PBR content before you graduate will dramatically increase your chances of passing the boards.

While on subspecialty rotations, READ and KNOW the associated PBR chapter. While on general inpatient or outpatient rotations, focus on the rest of the book, and take just 15 minutes per day to read the QUICK and high-yield topics about your patients. Pace yourself so that you can get through the material at least once per year. That’s it! If you do that, your in-training scores will skyrocket, and you will DESTROY the boards.

* ARE YOU TAKING THE INITIAL EXAM FOR THE FIRST TIME? If you have never taken the pediatric boards before and you have never come close to failing a medical board exam (average or above average board scores), visit the following PBR article for a detailed study schedule:

  [www.pediatricsboardreview.com/Schedule](http://www.pediatricsboardreview.com/Schedule)

* HAVE YOU EVER FAILED A MEDICAL BOARD EXAM (OR COME CLOSE)? If you were categorized as being “at risk” of failing based on your in-training exam scores, or if you have ever failed ANY medical board exam, or if you scored below the national average on your USMLE exams, visit the following PBR article for detailed instructions on how you can avoid failing your next attempt at the pediatric boards:

  [www.pediatricsboardreview.com/Schedule-Failed](http://www.pediatricsboardreview.com/Schedule-Failed)

* ARE YOU STUDYING FOR MOCA-PEDS? For the “at home,” MOCA-Peds questions, the plan is simple. Use the MOCA-PBR Study Guide & Test Companion. Go through our concise summaries of the most current year’s Learning Objectives in detail one time. It may only take you a single day! Since MOCA-PBR is setup to be an efficient test companion to help you with your open book exam, keep it open as you do your MOCA-Peds questions. Review your MOCA-PBR study guide once per quarter. That’s it!

  [www.pediatricsboardreview.com/MOC](http://www.pediatricsboardreview.com/MOC)

* ARE YOU STUDYING FOR THE MOC? If you are taking the pediatric recertification exam, then your goal should be to get through the PBR materials at least twice and to do at least 550 practice questions. Did you know that you may have access to **200 FREE ABP questions** (for board-certified pediatricians only after logging into the ABP website)?

PBR MEMORY AIDS - USING MNEMONICS AND PEGS

MNEMONICS: Mnemonics are memory aids that assist in helping you recall something. They are used throughout this study guide to help you study in a more focused and EFFICIENT manner. Not all of them will work for you, but many will. At the time of the exam, you WILL use many of the mnemonics in this book to help you answer questions. If you're lucky, you might even get a smile on your face as you think about me acting like a bit of a fool in some of the videos from the PBR Online Video Course (www.pediatricsboardreview.com/videos).

PEGS: Memory “pegs” are typically used to help you remember a list of items. By having 20 pre-memorized pegs that represent the numbers 1–20, you can easily “peg” items to those numbers. For example, in the PEG system outlined in this guide, a CAT symbolizes the number 9 (since cats are said to have “nine lives”).

So, if you are trying to memorize a grocery list of 10 items and one of those items is a gallon of milk, then the 9th item could be tied to an image, or a story, about a cat. It could be as simple as visualizing a funky looking BLACK CAT that has white legs drinking from an orange bowl of MILK. The white legs and orange bowl are simply thrown in to add color and imagination. Other strategies would include the use of disproportional size, the use of action, or the use of sound. The crazier the image, or story, the better!

Please note that some of the pegs in this guide will be used in the high-yield mnemonics in this book. Please look through them a few times to see if you can get the hang of it. If you can, then you might even be able to start creating some of your OWN fun and interesting mnemonics. If you cannot, it’s okay. Move on since there are only a handful of mnemonics that use one of the pegs listed here. Plus, if I do use a peg, I usually try to remind you of the peg association in the book.

Do you have ideas on how to make the pegs or mnemonics in this book more useful?

Please consider sharing your thoughts in the private, members’ only community called the PBR Facebook CREW! You can also submit them directly to us for consideration through our errors and clarifications portal:

### TWENTY PEGS

<table>
<thead>
<tr>
<th>#</th>
<th>USE THIS PEG</th>
<th>DESCRIPTIONS AND EXPLANATIONS OF PEGS</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>TREE TRUNK</td>
<td>Imagine the number 1 looking like a huge, brown tree trunk with limbs full of green foliage sitting at the top of a lush, green hilltop.</td>
</tr>
<tr>
<td>2</td>
<td>LIGHT SWITCH</td>
<td>A light switch has 2 positions (ON &amp; OFF). Use a switch OR a bulb for “2”.</td>
</tr>
<tr>
<td>3</td>
<td>STOOL</td>
<td>Imagine a dark, cherry wood stool with 3 legs.</td>
</tr>
<tr>
<td>4</td>
<td>CAR</td>
<td>Cars have FOUR doors and FOUR wheels.</td>
</tr>
<tr>
<td>5</td>
<td>GLOVE or HAND</td>
<td>A glove has 5 fingers. Consider making Michael Jackson’s shiny glove your peg for the number FIVE.</td>
</tr>
<tr>
<td>6</td>
<td>GUN</td>
<td>Another name for a gun is a 6-shooter (since guns used to only hold 6 bullets). GUNS also kill people and put them “6 feet under” the ground.</td>
</tr>
<tr>
<td>7</td>
<td>DICE or CARDS</td>
<td>Lucky number 7! Think Vegas, think craps, think gambling with dice or cards!</td>
</tr>
<tr>
<td>8</td>
<td>ICE SKATE</td>
<td>Ice skaters are known for performing a move called the figure 8. Eight also rhymes with skate.</td>
</tr>
<tr>
<td>9</td>
<td>CAT</td>
<td>Ever heard of the phrase, “Cats have nine lives”?</td>
</tr>
<tr>
<td>10</td>
<td>BOWLING BALL or BOWLING PINS</td>
<td>The goal of bowling is to knock down 10 pins.</td>
</tr>
<tr>
<td>11</td>
<td>AMERICAN FOOTBALL or GOAL POST</td>
<td>In American football, a field goal occurs when a football is kicked through two, white, vertical uprights (the goal post). A goal post looks like the number 11.</td>
</tr>
<tr>
<td>12</td>
<td>EGGS</td>
<td>Eggs usually come in a carton that contains a dozen (12) eggs.</td>
</tr>
<tr>
<td>13</td>
<td>HOCKEY MASK</td>
<td>Unlucky number 13 and the unlucky day/movie <em>Friday the 13th</em>. The main character in the movie <em>Friday the 13th</em> is Jason, a hockey-mask-wearing killer.</td>
</tr>
<tr>
<td>14</td>
<td>ROSE or CHOCOLATE HEART</td>
<td>February 14th is Valentine’s Day! So, think of a long-stemmed, red ROSE or perhaps a big CHOCOLATE HEART.</td>
</tr>
<tr>
<td>15</td>
<td>PAYCHECK</td>
<td>You get to give the IRS a huge chunk of your PAYCHECK every single year on TAX-DAY! APRIL 15th. Welcome to healthcare. 😊</td>
</tr>
<tr>
<td>16</td>
<td>DRIVER’S LICENSE</td>
<td>Age at which you get a driver’s license. Other pegs to consider include CANDLES, CANDY, or a BIRTHDAY CAKE for “Sweet SIXTEEN.”</td>
</tr>
<tr>
<td>17</td>
<td>MAGAZINE</td>
<td>There is a teen magazine called “SEVENTEEN.”</td>
</tr>
<tr>
<td>18</td>
<td>VOTING BOOTH</td>
<td>Age when you become a legal adult in the U.S. and are allowed to VOTE.</td>
</tr>
<tr>
<td>19</td>
<td>KNIGHTING</td>
<td>Imagine a “KNIGHTING” ceremony (sounds like 19) or a KNIGHT.</td>
</tr>
<tr>
<td>20</td>
<td>CIGARETTES</td>
<td>A pack of CIGARETTES has 20 cigarettes in it.</td>
</tr>
</tbody>
</table>

There are TONS of mnemonics throughout PBR. Many will seem brilliant. Others may not work for you at all. If that happens, please CREATE YOUR OWN. It’s initially intimidating but gets much easier with time.

Click here to read PBR’s article on mnemonics: [www.pbrlinks.com/MNEMONICS](http://www.pbrlinks.com/MNEMONICS)
GETTING THE MOST OUT OF THE PBR FORMAT

* **GRAY HIGHLIGHTING**: In the PBR hardcopy resources, gray highlighting is used over a word, phrase or chapter title to feature content that you **MUST KNOW**! These are very high-yield topics and are likely to be seen on the exam as an answer choice. PBR’s **online** books may have this content in **red text** or yellow highlighting.

* **DOUBLE TAKE**: You will **LOVE THIS**! A “DOUBLE TAKE” alert accompanies topics that are in the book multiple times. Medicine ties together. Ordinarily, that results in flipping back and forth between chapters. Double Take is a PBR-specific system used to **increase efficiency** by reducing the flipping back and forth between related (or similar) topics. Most of these topics tend to be very high-yield.

* **NAME ALERTS**: Many disease names sound very similar (e.g., Condyloma Lata versus Condyloma Acuminata, or Shwachman-Diamond Syndrome versus Diamond-Blackfan Anemia). NAME ALERTS serve as reminders to look for these subtle differences.

* **ABBREVIATIONS**: Some disorders are discussed using their abbreviations while others are discussed with their proper names. When searching for a topic online you should do a search for both. If you encounter an unfamiliar acronym, try this tool: www.AcronymFinder.com

* **MENEMONICS**: If you’re much smarter than me, you don’t need these. If you have an average memory, like me, you **MUST** learn to take advantage of memory aids. They can dramatically **increase your efficiency** as you journey to retain thousands of bits of information. The PBR mnemonics may or may not work for you, but many of them **should** serve as excellent examples of the various **types** of memory aids you can begin to create. **As a tip, always use as much action, color, exaggeration and “crazy” as possible.**

* **PEARLS**: These are bits of information that help tie key concepts together for you. Members **LOVE THEM**! Here’s a PEARL for you. ☺ There are only a finite number of ways that the ABP can test you on a disease process. Some PEARLS will show you how information could be presented on the exam.

**PBR ERRORS**

Are there errors in the PBR? Of course there are! But I also update the PBR every year with new recommendations and guidelines. I’m able to do this because of YOUR support. If you notice ANY error in the PBR materials (e.g., incorrect spelling, grammar, incomplete sentence, contradictory information, etc.), **PLEASE visit the following link to submit the error:**

www.pediatricsboardreview.com/ERROR

Please **DO NOT email individual errors** or clarification requests to me. It’s WAY too overwhelming. If you have **MULTIPLE** possible errors, send us a Word document. I LOVE the members who do that!!

Also, because it’s impossible for me to respond to every submission individually, I frequently release PBR CONTENT & CLARIFICATION GUIDES to active PBR members (FREE). **Please note that THIS IS NOT A GUARANTEED SERVICE, but it is something I have done every single year since 2011**. Your submissions drive this process and allow me to provide you with updated pediatric knowledge year after year.
PBR TOPIC CLARIFICATION OR CONFUSION

If you are struggling with a concept, get help from the members only PBR Facebook CREW! It's EXTREMELY active (especially starting around June or July of every year). If you find a concept explained poorly and think the PBR needs a revision, feel free to use the error portal to bring it to my attention:

www.pediatricsboardreview.com/ERROR

PBR IMAGE LINKS

The image links in the PBR lead to PHENOMENAL images throughout the World Wide Web! BUT these images are located on NON-PBR websites. Some websites go out of business. When this happens, we simply need to replace the image. Typically, no more than 2% of the links within PBR are “bad.” We have an awesome system that allows us to change the link on our end, but we need your help when a link “dies.” Simply submit any “bad link” through the portal below and we'll take care of it!

www.pediatricsboardreview.com/BADLINK

PBR & AVSAR – THE NON-PROFIT CONNECTION

WHAT IS AVSAR? I started a non-profit organization, named AVSAR Inc., at the age of 27 to help support existing non-profit organizations that were already doing great work in slum areas.

After medical school, I spent one year volunteering in the slums of Mumbai. The need for help was profound and conditions were shocking. Six-year-old children worked as child laborers, using their small, agile fingers to make beautifully detailed handiwork. Others spent their days looking for recyclables in garbage dumps.

I bonded with these children. I then created a non-profit organization under the U.S. IRS, called AVSAR. We recruited volunteers from around the world (college students, dentists, doctors, MBA students) to “help where the help was needed.” My personal success stories included the creation of an efficient Western-style clinic for child laborers and the establishment of an adolescent sex-education curriculum.

AVSAR helped thousands of people, but the core volunteer program was shut down in my last year of residency due to lack of funding and my 80-hour workweeks. Even so, the projects and systems created by volunteers live on and continue to help thousands more every year.

In order to re-launch AVSAR, we needed funding. Through Pediatrics Board Review Inc. (a private company) I donated over $50,000 to AVSAR before ever paying myself a penny.

It’s because of my passion for helping people that I created AVSAR, and the passion drives me to help pediatricians through the PBR EXPERIENCE.

I hope that you’re able to use the many resources within the PBR Certification System and the PBR community to EFFICIENTLY study and pass your exam. I very much look forward to being a part of your success. Now let’s get started!

PRODUCT REGISTRATION

As mentioned on the PBR site, our first-time pass guarantee applies to anyone taking an ABP initial or recertification exam for the first time. “Money Back” requests may be made within 30 days of the score release date. The original PBR purchase must have been made at least 45 days prior to the exam. Submission of the product registration form is required for the money back pass guarantee and the form must be submitted within 90 days of your purchase and before you take the exam. For complete details, please visit:

www.pediatricsboardreview.com/guarantee

Visit the following link to register your product(s):

www.pediatricsboardreview.com/register

If you made an official purchase that was initiated through the PBR website but resulted in your purchase being processed through Lulu.com, Amazon.com, or another authorized distributor of PBR resources, please contact us through www.pediatricsboardreview.com/contact so that you can send us a copy of your receipt.

Chapter 6: DERMATOLOGY

GENERAL DERMATOLOGY

CONTACT DERMATITIS, A DIAPER RASH

(DOUBLE TAKE) CUTANEOUS CANDIDIASIS, A DIAPER DERMATITIS

(DOUBLE TAKE) ATOPIC DERMATITIS (ECZEMA)

NUMMULAR ECZEMA

(DOUBLE TAKE) ECZEMA HERPETICUM

SEBORREIC DERMATITIS (AKA CRADLE CAP)

PSORIASIS

GUTTATE PSORIASIS

(DOUBLE TAKE) LANGERHANS CELL HISTIOCYTOSIS (LCH) = HISTIOCYTOSIS X

RASHES THAT SPARE THE INGUINAL FOLDS

PRURITIC RASHES

KERATOSIS PILARIS

LICHEN SCLEROSUS

LICHEN STRIATUS

ALLERGIC CONTACT DERMATITIS, A TYPE IV HYPERSENSITIVITY SKIN RASH

(DOUBLE TAKE) BIOTIN/BIOTINIDASE DEFICIENCY

PAPULAR URITCARIA

VITILIGO

(NAME ALERT) ICHTHYOSIS VULGARIS

(NAME ALERT) LAMELLAR ICHTHYOSIS (AKA COLLODION BABY)

(NAME ALERT) HARLEQUIN ICHTHYOSIS

PYODERMA GANgrenOSUM

(DOUBLE TAKE) ECTHYMA GANgrenOSUM

GRANULOMA ANNULARE

PITTED KERATOLYSIS

(DOUBLE TAKE) DERMATOMYOSITIS
MOLLUSCUM CONTAGIOSUM ................................................................. 155
(DOUBLE TAKE) HUMAN PAPILLOMA VIRUS (HPV) ............................................. 156

CONDYLOMA LATUM ................................................................. 156
HERPES SIMPLEX VIRUSES 1 & 2 (HSV 1 & 2) .......................................................... 156
HERPES SIMPLEX VIRUS ENCEPHALITIS (HSV ENCEPHALITIS) .................................. 157
(DOUBLE TAKE) HERPES SIMPLEX VIRUS GINGIVOSTOMATITIS .............................. 157
(DOUBLE TAKE) ECZEMA HERPETICUM .................................................................. 157
(DOUBLE TAKE) BLUEBERRY MUFFIN RASH DIFFERENTIAL DIAGNOSIS ................. 157
SCABIES ............................................................................................................. 158
PEDICULOSIS CAPITIS (AKA HEAD LICE) ............................................................... 158
PEDICULOSIS PUBIS (AKA PUBIC LICE or CRABS) ..................................................... 158

THE “ERYTHEMA” RASHES ............................................................................. 158
ERYTHEMA NODOSUM ..................................................................................... 158
(DOUBLE TAKE) ERYTHEMA CHRONICUM MIGRANS .............................................. 158
(DOUBLE TAKE) ERYTHEMA MARGINATUM ......................................................... 159
(DOUBLE TAKE) ERYTHEMA INFECTIOSUM ......................................................... 159
ERYTHEMA TOXICUM NEONATORUM ................................................................. 159
ERYTHEMA MULTIFORME .................................................................................... 160

THE NEWBORN RASHES ............................................................................... 160
MILLIARIA RUBRA .......................................................................................... 160
MILIA ............................................................................................................... 160
SEBACEOUS HYPERPLASIA ............................................................................. 160
ERYTHEMA TOXICUM NEONATORUM ................................................................. 160
TRANSIENT NEONATAL PUSTULAR MELANOSIS ............................................. 160
NEONATAL ACNE (AKA NEONATAL CEPHALIC PUSTULOSIS) ................................ 161
INFANTILE ACNE ............................................................................................. 161
LIVEDO RETICULARIS (AKA CUTIS MARMORATA) ............................................... 161

ALOPECIA & HAIR FINDINGS ........................................................................ 161
ALOPECIA AREATA .......................................................................................... 161
ALOPECIA TOTALE ......................................................................................... 161
ALOPECIA UNIVERSALIS ............................................................................... 161
(DOUBLE TAKE) ZINC DEFICIENCY .................................................................. 161
(DOUBLE TAKE) ACRODERMATITIS ENTEROPATHICA ......................................... 162
(DOUBLE TAKE) BIOTIN/BIOTINIDASE DEFICIENCY ........................................... 162
TELLOGEN EFFLUVIUM ................................................................................... 162
TINEA CAPITIS (AKA RINGWORM) ................................................................... 162
TRICHOSTILLOMANIA ....................................................................................... 163
(DOUBLE TAKE) ESSENTIAL FATTY ACID DEFICIENCIES ................................. 163
APLASIA CUTIS CONGENITA ......................................................................... 163

Chapter 7: NEONATOLOGY .......................................................................... 164

WEIGHT, LENGTH, & HEAD CIRCUMFERENCE ............................................... 164
NEWBORN WEIGHT ....................................................................................... 164
PREDICTED GROWTH RULES OF THUMB ....................................................... 164
INTRAUTERINE GROWTH RESTRICTION = INTRAUTERINE GROWTH RETARDATION = IUGR ........................................................................................................... 164
HEAD CIRCUMFERENCE – MACROCEPHALY, HYDROCEPHALY, AND MICROCEPHALY ............................................................................................................. 165
NUTRITION, BREAST MILK, & FORMULA ..................................................... 165
NEONATAL POTASSIUM REQUIREMENTS ......................................................... 165
Chapter 8: DEVELOPMENTAL MILESTONES & ANTICIPATORY GUIDANCE

KEY NOTES & CONCEPTS

AN IMPORTANT NOTE ABOUT PBR’S MILESTONES CHECKLISTS

DEVELOPMENTAL MILESTONES THROUGH ADOLESCENCE

BIRTH MILESTONES TO KEEP ON YOUR RADAR

1-MONTH-OLD MILESTONES TO KEEP ON YOUR RADAR

2-MONTH-OLD MILESTONES TO KEEP ON YOUR RADAR

SURVEILLANCE MILESTONES - 4 MONTHS OF AGE

4-MONTH-OLD MILESTONES TO KEEP ON YOUR RADAR

SURVEILLANCE MILESTONES - 6 MONTHS OF AGE

6-MONTH-OLD MILESTONES TO KEEP ON YOUR RADAR

SURVEILLANCE MILESTONES - 9 MONTHS OF AGE

9-MONTH-OLD MILESTONES TO KEEP ON YOUR RADAR

SURVEILLANCE MILESTONES - 12 MONTHS OF AGE

15-MONTH-OLD MILESTONES TO KEEP ON YOUR RADAR

SURVEILLANCE MILESTONES - 18 MONTHS OF AGE

18-MONTH-OLD MILESTONES TO KEEP ON YOUR RADAR

SURVEILLANCE MILESTONES - 2 YEARS OF AGE

2-YEAR-OLD MILESTONES TO KEEP ON YOUR RADAR

SURVEILLANCE MILESTONES - 30 MONTHS OF AGE

30-MONTH-OLD MILESTONES TO KEEP ON YOUR RADAR

SURVEILLANCE MILESTONES - 3 YEARS OF AGE

3-YEAR-OLD MILESTONES TO KEEP ON YOUR RADAR

SURVEILLANCE MILESTONES - 4 YEARS OF AGE

4-YEAR-OLD MILESTONES TO KEEP ON YOUR RADAR

SURVEILLANCE MILESTONES - 5 YEARS OF AGE

5-YEAR-OLD MILESTONES TO KEEP ON YOUR RADAR

6-YEAR-OLD MILESTONES TO KEEP ON YOUR RADAR

MILESTONES TO KEEP ON YOUR RADAR - DRAWING SHAPES

COGNITION

COGNITIVE REASONING VERSUS CONCRETE THINKING

ANTICIPATORY GUIDANCE & SAFETY

PREVENTATIVE MEDICINE TERMINOLOGY

FLUORIDE SUPPLEMENTATION

HOT WATER HEATER

HEARING SCREENING (AUDIOMETRY)

LEAD SCREENING

FIRST DENTAL EXAM

MOUTH GUARDS

Chapter 6: DERMATOLOGY

GENERAL DERMATOLOGY

CONTACT DERMATITIS, A DIAPER RASH
Contact dermatitis is a diaper rash that spares the inguinal folds. Treat with more frequent diaper changes and a topical barrier, such as zinc oxide.

(DOUBLE TAKE) CUTANEOUS CANDIDIASIS, A DIAPER DERMATITIS
Cutaneous candidiasis, a diaper dermatitis, can occur secondary to a contact dermatitis or recent antibiotic use. It presents as a beefy red rash with papular satellite lesions. This rash goes into the inguinal folds. Use a KOH prep to confirm diagnosis, and treat with a topical antifungal, such as nystatin or clotrimazole.

IMAGE (includes satellite lesions): www.pbrlinks.com/CUTASCAN1
http://www.pediatrics.wisc.edu/education/derm/tutc/80.html

(DOUBLE TAKE) ATOPIC DERMATITIS (ECZEMA)
In babies, atopic dermatitis (eczema) SPARES the diaper folds/flexural surfaces (but not in older kids). It is PRURITIC and LICHENIFIED. Food allergies CAN exacerbate eczema. The contribution of early food ingestion to the development of atopic dermatitis is controversial. Eggs, fish, milk, peanut, soy, wheat and strawberries are the foods thought to possibly contribute, but delaying their introduction doesn’t help. Positive skin and RAST tests for foods are not predictive, either. Treatment options include emollients and topical steroids. Avoid use of steroids in areas where the skin is thin. Use the lowest potency steroids that work. Non-steroidal treatment options include topical calcineurin inhibitors (tacrolimus and pimecrolimus) and topical PDE4 inhibitors (crisaborole). Watch for superinfection if the eczema is not improving with appropriate therapy.

IMAGE: www.pbrlinks.com/ECZEMA1

NUMMULAR ECZEMA
Nummular eczema refers to coin-shaped eczematous lesions usually on the extensor surfaces of extremities. Lesions are uniform, without any central clearing. Lesions may ooze, crust, or have a scaling pattern. Treat with steroids.

IMAGE: www.pbrlinks.com/NUMMULAR1

MNEMONIC: Imagine that you are standing with your arms in abduction, and you are balancing silver COINS that are UNIFORM in color (without central clearing) on the BACK of both of your arms (extensor surface).

(DOUBLE TAKE) ECZEMA HERPETICUM
Eczema herpeticum is a potentially life-threatening disseminated herpes (HSV) infection occurring at sites of skin damage, including sites of eczema. Look for HSV Vesicles + Crusted Lesions. Even if a description is not given of a vesicular rash, have a high index of suspicion for a rash “not improving with steroids and/or antibiotics.” Diagnose with HSV PCR or a viral culture, but do not delay treatment. A Tzanck smear can support the diagnosis. Treat by STOPPING topical steroids and/or immunosuppressants and starting Acyclovir.

IMAGE: www.pbrlinks.com/ECZEMAHHERPE1
IMAGE: www.pbrlinks.com/ECZEMAHHERPE2
IMAGE: www.pbrlinks.com/ECZEMAHHERPE3
SEBORRHEIC DERMATITIS (AKA CRADLE CAP)
Seborrheic dermatitis (AKA cradle cap), is a NONpruritic, inflammatory, flaky rash with white to yellow scales that usually forms in oily areas (e.g., scalp). It is often seen in the first two months of life. After that, it's not very common until adolescence. You may treat with topical antifungal agents or mild steroids. The skin may be left with hypopigmented areas, especially in the folds. If asked to name the hypopigmented areas, choose PITYRIASIS ALBA.

IMAGE: www.pbrlinks.com/SEBORRHEIC1

PSORIASIS
Psoriasis is a very well-defined, red, flaky rash covered with silver-white patches, called plaques. It can also be described as thick and scaly (like seborrheic dermatitis). It sometimes results in punctate bleeding when scales are removed (this is called the Auspitz sign). It can occasionally be limited to the diaper area, in which case it goes into the inguinal folds. Topical steroids are the mainstay of treatment. For the face, use topical calcineurin inhibitors (tacrolimus or pimecrolimus). For severe disease, or disease not responding to steroids, use phototherapy, methotrexate or etanercept.

GUTTATE PSORIASIS
The "guttate" in guttate psoriasis means "drop like" and describes the shape of these discrete psoriatic lesions. This can be preceded by a Group A Strep (pyogenes) infection.

IMAGE: www.pbrlinks.com/GUTTATE1

(DOUBLE TAKE) LANGERHANS CELL HISTIOCYTOSIS (LCH) = HISTIOCYTOSIS X
Langerhans Cell Histiocytosis (LCH), AKA Histiocytosis X, is a PAPULAR rash that is sometimes associated with petechiae. The rash is located in the folds (inguinal folds, supra-pubic folds, perianal area). It can resemble eczema, but the petechiae or PAPULES should guide you towards this diagnosis. LCH is a type of cancer. You may be shown a lytic bone lesion (possibly of the skull). Diagnose by skin biopsy. LCH can also be associated with DIABETES INSIPIDUS. Treat by removing the lesion and giving steroids, ± chemotherapy.

PEARLS: Do not confuse this with Wiskott-Aldrich (WiXotT-Aldrich, X-linked, low IgM, high IgA, TIE = Thrombocytopenia, small platelets, Infections, and Eczema). Also, if they describe an eczema or seborrheic dermatitis type of rash in a patient with high urine output, LCH is your diagnosis.

IMAGE: www.pbrlinks.com/LANGERHANSCELL1
IMAGE: www.pbrlinks.com/LANGERHANSCELL2
IMAGE: www.pbrlinks.com/LANGERHANSCELL3

RASHES THAT SPARE THE INGUINAL FOLDS
Eczema and Contact Dermatitis should be high on your differential for rashes that spare the inguinal folds.

PRURITIC RASHES
Consider atopic dermatitis/eczema, HSV, scabies, tinea, or Varicella (VZV) in your differential of any pruritic rashes.

KERATOSIS PILARIS
Keratosis pilaris forms due to an overgrowth of the horny skin. It can look similar to eczema and may have a mild erythematous background. No treatment is needed.
LICHEN SCLEROSUS
Lichen sclerosus is a chronic, inflammatory, dry, white, and somewhat scaly rash that is usually found in the genital area. There is no thickening or sclerosis. There are usually no symptoms, although a small percentage of patients have pruritis. Look for a picture of labia with a rash.

LICHEN STRIATUS
Lichen striatus is a rash that looks like eczema, but is linear or papular and can follow the Lines of Blaschko.

ALLERGIC CONTACT DERMATITIS, A TYPE IV HYPERSENSITIVITY SKIN RASH
Allergic contact dermatitis is a Type IV hypersensitivity skin rash that requires a prior exposure, and tends to be pruritic. See if the location of the rash is in an area where a nickel-containing belt buckle, earring, necklace, or other jewelry could have been. A rash may present even after years of wearing the irritant. The rash from nickel exposure is more erythematous and can become lichenified. The classic example of Type IV reactions is the rash of poison ivy, or other “leaves of 3” (including poison oak and poison sumac). Regarding a contact dermatitis from these plants, it will not spread once the affected area is washed with soap and water. The fluid from within the vesicles cannot spread the rash. This reaction is a Type IV Cell Mediated Hypersensitivity Reaction, and is called a Rhus reaction (from the old genus name of poison ivy, Rhus radicans). The rash is vesicular and may be in a linear configuration (where the leaves rubbed across the skin).

* PEARL: First exposure may take 1 week to develop the rash as helper T cells proliferate and “remember” the agent. After that, the rash may develop within hours of exposure. “No wonder I had to go through the 2-step PPD before starting as an attending!”

* PEARL: REMINDERS: A PPD and the skin testing of Candida, Mumps, and Tetanus are all Type IV reactions.

* MNEMONICS:
  - “LEAVES OF THREE, LET THEM BE!”
  - Type IV reaction: I + V = the Roman numeral IV = 4, and the 4th letter in the alphabet is D = PPD or CD4
  - I + V also should you remind you of poison IVy.

* IMAGE: www.pbrlinks.com/ALLERGICCONTACT1
* IMAGE: www.pbrlinks.com/ALLERGICCONTACT2

(DOUBLE TAKE) BIOTIN/BIOTINIDASE DEFICIENCY
Biotin and biotinidase deficiencies may present with a RASH + ALOPECIA + NEUROLOGIC SIGNS (ataxia, coma, etc.). Patients may also have lactic acidosis. Treat with biotin.

MENEMONIC: Imagine the rusted TIN MAN from The Wizard of Oz walking with an ATAXIC gait as he SCRATCHES the rusty RASH off his arm. Notice that he has NO HAIR!
PAPULAR URTICARIA

Papular urticaria is a rash due to hypersensitivities to the insect bites of bedbugs, fleas, and mosquitoes that results in edema, erythema, and pruritus. It presents in recurrent crops. It tends to come and go, wax and wane every few weeks or months. Some lesions may be umbilicated. Treat by removing the offending agent (fleas, lice, bedbugs, or outside insects).

PEARL: You may not be given the history of a specific insect or exposure.

MNEMONIC. “CROPular Urticaria.” Where do you find insects? In CROPS, of course!

IMAGE: www.pbrlinks.com/PAPULAR1

VITILIGO

Vitiligo results in depigmented macules. Look for a “salt and pepper” type of pattern of re-pigmentation. It is often associated with halo nevi.

IMAGE: www.pbrlinks.com/VITILIGO1

(NAME ALERT) ICHTHYOSIS VULGARIS

Ichthyosis vulgaris is a rash that resembles fish scales. It is often seen in atopic dermatitis patients. You may attempt treatment with ammonium lactate or alpha-hydroxy-acid containing agents. The name alert is for lamellar ichthyosis and harlequin ichthyosis.

IMAGE: www.pbrlinks.com/ICHTHYOSIS1

(NAME ALERT) LAMELLAR ICHTHYOSIS (AKA COLLODION BABY)

Lamellar ichthyosis (AKA collodion baby) is noted at the time of birth in newborns. A thin, transparent film is noted on the body. Eyelashes are missing. Eyelids seem everted (ectropion). The name alert is for harlequin ichthyosis and ichthyosis vulgaris.

IMAGE: www.pbrlinks.com/LAMELLAR1
IMAGE: www.pbrlinks.com/LAMELLAR2
IMAGE: www.pbrlinks.com/LAMELLAR3

(NAME ALERT) HARLEQUIN ICHTHYOSIS

Harlequin ichthyosis presents with a newborn that looks much more abnormal than lamellar ichthyosis. The covering is hard (“armor-like”) and horny. Movement is restricted. Prognosis is poor comparatively. The name alert is for lamellar ichthyosis and ichthyosis vulgaris.

IMAGE: www.pbrlinks.com/HARLEQUIN1

PYODERMA GANGLRENSUM

The etiology of pyoderma gangrenosum is unknown, but it is known to be associated with other systemic diseases such as Crohn’s. Lesions are described as deep, bluish, necrotic, and boggy-looking ulcers.

IMAGE: www.pbrlinks.com/PYODERMA1
IMAGE: www.pbrlinks.com/PYODERMA2
(DOUBLE TAKE) ECTHYMA GANGRENOSUM
Ecthyma gangrenosum is usually a sign of a PSEUDOMONAS infection and possibly sepsis in an immunocompromised patient, especially LEUKEMIA! Look for a neutropenic patient with black, necrotic, ulcerative lesions with surrounding erythema and edema. These lesions are often located in the groin/diaper area.

**IMAGE:** www.pbrlinks.com/ECTHYMA1

GRANULOMA ANNULARE
Granuloma annulare is a chronic skin condition with an annular (circular) lesion occurring under the skin’s surface. It may be slightly pruritic. There are no scales.

**PEARL:** This looks kind of like ringworm, but there is NO SCALING! Keep this in mind any time you see Tinea as an answer choice.

**IMAGE:** www.pbrlinks.com/GRANULOMA1

PITTED KERATOLYSIS
Pitted keratolysis is a condition in which there is pitted skin in areas of pressure. There will probably be a history of strong foot odor.

**IMAGE:** www.pbrlinks.com/PKERATOLYSIS1

(DOUBLE TAKE) DERMATOMYOSITIS
Dermatomyositis results in a heliotropic, violaceous rash in malar area. Gottron's Papules (erythematous, shiny, pruritic papules over the metacarpals) may be present. Patients will have proximal weakness and possible telangiectasias near the nail folds. Diagnose with a MUSCLE BIOPSY. The CK LEVEL WILL BE HIGH. These patients can also get calcinosis cutis.

**PEARL/REMINDER:** Duchenne Muscular Dystrophy also has elevated CK levels.

**IMAGE:** www.pbrlinks.com/DERMATOMYOSITIS1
**IMAGE:** www.pbrlinks.com/DERMATOMYOSITIS2
**IMAGE:** (calcinosis cutis) www.pbrlinks.com/DERMATOMYOSITIS3

STEVENS-JOHNSON SYNDROME (SJS) and TOXIC EPIDERMAL NECROLYSIS (TEN)
Stevens-Johnson Syndrome (SJS) and Toxic Epidermal Necrolysis (TEN) are on a spectrum. They are differentiated by body surface area (BSA). SJS is diagnosed if < 10% of the BSA is involved, and TEN is the diagnosis if > 30% of body surface area is involved. Anything in between is called SJS/TEN. Look for bullae or erosions followed by hemorrhagic crusting. There may be severe blistering and a Nikolsky sign (separation of epidermis with firm pressure) or the presence of the Asboe-Hansen sign (spread of a blister laterally when pressure is applied). It is a full thickness rash similar to a burn. Skin lesions may look like a BULLSEYE or TARGET lesion, with the center described as DARK, DUSKY, or VIOLACEOUS. The target CAN be a blister or vesicle. At least two mucous membranes must be involved (most commonly the lips and eyes). If the eyes are involved, this is an ocular emergency!

**MEDICATION ASSOCIATIONS:** Aromatic seizure medications, penicillins, NSAIDS, and sulfa drugs. The rash usually occurs within 2 months of starting the medication.

**MNEMONIC:** Imagine Stevens and Johnson as two very arrogant hunters. They went TARGET shooting one day in an area that said, “Beware of BULLS.” They learned their lesson the hard way when a BULL came out of nowhere and did some target practice of his own.
ERYTHEMA MULTIFORME (EM)

Erythema multiforme (EM) is an acute, immune-mediated condition with target lesions +/- mucosal involvement. It was previously thought to be on the spectrum of SJS/TEN, but that is no longer the case. Distinguishing erythema multiforme minor from erythema multiforme major is not straightforward, so that terminology is not likely to be tested. IF you are tested on the terminology, pick minor if the patient is not toxic. Both minor and major have tiny target lesions (probably dusky in the middle). Sometimes you have to use your imagination to envision the target. Lesions may just look a little darker on the inside of the lesion than the outside. Lesions usually start on the hand and/or feet and THEN progress to the trunk. There will be 0–1 mucous membranes involved (if more, then it may be a case of SJS or TEN). Possible etiologies include HSV, Mycoplasma, and Syphilis.

IMAGE: www.pbrlinks.com/ERYTHEMULTI1
IMAGE: www.pbrlinks.com/ERYTHEMULTI2
IMAGE: www.pbrlinks.com/ERYTHEMULTI3
IMAGE: www.pbrlinks.com/ERYTHEMULTI4

(DOUBLE TAKE) NEONATAL LUPUS

The baby does NOT have lupus. Neonatal lupus occurs in children of mothers with SLE due to fetal exposure to maternal SLE-related antibodies. It is rare. Findings may include increased LFTs, petechiae, rash, scaling, thrombocytopenia, third degree AV heart block with bradycardia, or hydrops fetalis (fluid accumulation in two or more fetal compartments usually due to heart failure). Diagnose by sending maternal Anti-Ro or anti-La antibodies (AKA anti-SS-A or SS-B).

IMAGE: www.pbrlinks.com/NEONATALLUPUS1

RASHES WITH CENTRAL CLEARING (PEARL)

Hives/urticaria, Rheumatic Fever (“jonEs” = E. Marginatum = MARGINs progress to give central clearing), Tinea (raised border/ringworm)

RASHES WITH CENTRAL DARKENING/TARGET LESIONS (PEARL)

SJS/TEN (“target shooting, bull”), Brown recluse spider bite (see Emergency Medicine), Lyme Disease/Borrelia/Erythema Migrans

URTICARIA/HIVES

Urticaria (hives) is a pruritic rash due to an allergic exposure. Pink center with a more erythematous border. Giving histamine blockers (both H1 & H2) may be helpful.

IMAGE: www.pbrlinks.com/URTICARIA1
IMAGE: www.pbrlinks.com/URTICARIA2

SCLERODERMA

Scleroderma patients have thickened skin with an ivory or waxy, appearance. Affects girls more frequently. The limited form is more common than the systemic form in children (located at one site only). Lesions may initially be painful and tender. Skin is often hard and may have a linear appearance. Treat with topical lubricants for limited cases. May have to use steroids or other immunosuppressives in more severe cases.

IMAGE: www.pbrlinks.com/SCLERODERMA1
IMAGE: www.pbrlinks.com/SCLERODERMA2
DERMOID CYSTS
Dermoid cysts are saclike growths present at birth. They are like teratomas in that they can contain hair and teeth. They are often associated with tufts or sinuses. They grow slowly and can get infected, so most of them should be REMOVED. Especially those in sensitive areas, including the face or nasal area. They will require imaging before removal.

IMAGE: www.pbrlinks.com/EPIDERMOIDCYSTS1
IMAGE: www.pbrlinks.com/EPIDERMOIDCYSTS2
IMAGE: www.pbrlinks.com/EPIDERMOIDCYSTS3

EPIDERMOID CYSTS (AKA EPIDERMAL CYSTS)
These cysts are benign and are very common. They are flesh-colored nodules with a black punctum (black dot) that develop at one month of age or later. They often occur on pressure sites (buttocks, back, etc).

COMEDONAL ACNE
Think of comedonal acne as an OBSTRUCTIVE process that creates white heads and black heads. Treat with a RETINOID keratinolytic agent. You may also prescribe benzoyl peroxide.

PEARL: An answer with topical retinoic acid + benzoyl peroxide twice daily is probably WRONG. Benzoyl peroxide inactivates traditional retinoids (tretinoin), so one should be used at night, and the other in the morning (or at least with some time in between). Newer retinoids, like adapalene and tazarotene, are more stable and may be used at the same time.

INFLAMMATORY ACNE
Inflammatory acne is differentiated from comedonal acne by its RED BASE.

* Minor cases: If the acne is localized with small lesions, use a TOPICAL antimicrobial agent, such as Benzoyl peroxide, Clindamycin or Erythromycin. Retinoic acid topicals are also included in most regimens.

* Severe cases: If large, nodular, or in multiple areas, use ORAL antibiotics. First line is Tetracycline, Doxycycline, or Erythromycin. Minocycline is a second line agent. These antibiotics provide a bactericidal and an anti-inflammatory effect. You may also try oral contraceptive pills (OCPs) in females for their anti-androgen effects. If all else fails, use ISOTRETINOIN.

ISOTRETINOIN
Isotretinoin is a miracle drug that fights sebum production and bacteria, while also decreasing inflammation and comedonal acne. But it is TERATOGENIC, so obtain TWO negative pregnancy tests before starting the medications. Also, patients must use TWO forms of birth control starting one month before starting the medication and until one month after. In addition, they should have monthly pregnancy tests.

PEARL: Acne can begin as early as 8 years of age. If the boards present a 7-year-old child with what looks like acne, CONSIDER ANOTHER DIAGNOSIS! Consider exogenous steroid use, precocious puberty, and TUBEROUS SCLEROSIS.

(DOUBLE TAKE) APTHOUS ULCERS
Aphthous ulcers are painful lesions found within the oral mucosa (buccal mucosa, lips, and tongue) with a grayish-white base and a rim of erythema. These can occur in isolation or in association with Behcet's or Shwachman-Diamond syndrome.

IMAGE: www.pbrlinks.com/APHTHOUSULCERS1
IMAGE: www.pbrlinks.com/APHTHOUSULCERS2
TEETH ISSUES

TOOTH TIMELINE
Tooth appearance follows a timeline. All anterior teeth are present (eight of them) by about 12 months. Primary teeth are typically fully erupted by age 30 months. Some children do not have teeth by 1 year of age, so reassurance is okay. For ABP questions, they will be more focused on abnormal-looking teeth.

PEG TEETH
Peg teeth refers to teeth that are smaller than usual. Sometimes they are tapered and look like fangs. This usually affects the lateral incisors and is associated with INCONTINENTIA PIGMENTI and HYPOIDROTIC ECTODERMAL DYSPLASIA.

IMAGE: www.pbrlinks.com/PEGTEETH1
IMAGE: www.pbrlinks.com/PEGTEETH2

HUTCHINSON TEETH
Hutchinson teeth are found in CONGENITAL SYPHILIS. These children have teeth that are smaller and more widely spaced. They also have notches on the biting surfaces.

IMAGE: www.pbrlinks.com/HUTCHTEETH1
IMAGE: www.pbrlinks.com/HUTCHTEETH2

TETRACYCLINE TEETH STAINING
If tetracycline is used at a young age, teeth can end up having yellow, brown, or blue band-like stains. Avoid tetracycline until patients are at least 8 years of age.

IMAGE: www.pbrlinks.com/TETRATEETH1

FLUOROSIS
Fluorosis is the mottled discoloration of teeth due to excess fluorine use during tooth development (up to age 4).

IMAGE: www.pbrlinks.com/FLUOROSIS1

VASCULAR & PIGMENTED LESIONS

PEARL/MNEMONIC: HEMANGIOMAS are different from VASCULAR MALFORMATIONS (e.g., Port Wine Stains/capillary malformations). VASCULAR MALFORMATIONS tend to have much more associated morbidity. You might say that VMs are Very Morbid in comparison.

IMAGE: (slideshow on birthmarks) www.pbrlinks.com/VM1

HEMANGIOMAS
Hemangiomas are an abnormal build-up of blood vessels. They eventually self-involute but are dangerous during PROLIFERATION PHASE. They are otherwise benign. They usually look red, but can appear blue if deep (CAVERNOUS HEMANGIOMAS). Proliferation is greatest during the first 6 months, and lesions are largest around 1 year of age. Lesions start to involute around 2 years of age and disappear by 5–10 years of age. If in a benign area, they can be left alone. If in a more sensitive area (near the eyes, ears, nose, throat, or spine), they may require medical treatment with propranolol (first line drug). Second line therapies include systemic steroids, pulsed dye laser therapy and surgery.
**COMPLICATIONS:** If located in the beard area, look for airway issues. If near the eye, it’s okay as long as there is no problem with VISION. Those near the ears, nose, and lips can be troublesome if they ulcerate. If in the lumbosacral area, there is concern for spinal dysraphism (incomplete fusion of a raphe, especially the neural folds/tube). High output congestive heart failure (CHF) can occur due to large, or multiple hemangiomas.

**IMAGE:** www.pbrlinks.com/HEMANGIOMAS1  
**IMAGE:** www.pbrlinks.com/HEMANGIOMAS2

**DOUBLE TAKE) PHACES SYNDROME**

A diagnosis of PHACES syndrome requires a large hemangioma in the face/neck area PLUS one of the following defects:

* Posterior fossa malformation (DANDY WALKER)
* Hemangioma. Often in the distribution of the Facial Nerve. Look for a large **segmental** hemangioma on the FACE. Segmental refers to what looks like a nerve distribution (segmented by normal skin in between).
* Arterial cerebrovascular anomaly: Including STROKES
* Cardiac anomalies: Especially **COARCTATION OF THE AORTA**
* Eye anomalies: **MICROPHTHALMIA, STRABISMUS**
* Sternal defect

**IMAGE:** www.pbrlinks.com/PHACES1

**DOUBLE TAKE) KASABACH-MERRITT SYNDROME**

In Kasabach-Merritt syndrome, there are large, congenital vascular tumors. They are not true hemangiomas but can cause a severe **CONSUMPTIVE COAGULOPATHY** (in the form of **thrombocytopenia** and the consumption of coagulation factors) and death. It is most common in infants.

**IMAGE:** www.pbrlinks.com/KASABACH1  
**IMAGE:** www.pbrlinks.com/KASABACH2

**PEARL:** Look at the above images closely. Make sure you look closely at images so that you do not get this vascular tumor confused with hemihypertrophy.

**MNEMONIC:**

- >---< is used by many of us when recording CBC results.

  

  ![Assabach](www.pbrlinks.com/KASABACH1)  

**NEVUS SIMPLEX**

A nevus simplex is a **Salmon** colored lesion often called a **Stork** bite or **Salmon** patch. They blanch on pressure and tend to be on the midline or symmetrical (e.g. on both eyelids). These fade with time and are benign. Do not get this term confused with Nevus FLAMMEUS (AKA PORT WINE STAIN).

**PEARL:** These BLANCH with pressure.

**IMAGE:** www.pbrlinks.com/NevusSimplex1  
**IMAGE:** www.pbrlinks.com/NevusSimplex2
PORT WINE STAINS (PWS) (AKA NEVUS FLAMMEUS)

Port Wine Stains (PWS), AKA nevus flammeus, are CAPILLARY malformations. They tend to be unilateral and segmental, not crossing the midline. They start as pink/flat lesions that become dark red-purple. They then progress to being thick/raised in adulthood. These PWSs are Present at birth and are PERMANENT. They are benign if noted in isolation. If noted on the face, they can be associated with glaucoma (increased intraocular pressure that can present as a red eye).

**IMAGE:** www.pbrlinks.com/PORTWINE1
**IMAGE:** www.pbrlinks.com/PORTWINE2

**PEARL:** They grow in proportion to the child and tend to occur in a segmental distribution respecting the midline.

**MNEMONIC:** Glaucoma is a concern if a PWS is noted in the facial area. Is that why Mikhail Gorbachev wore glasses? Because he has that big FLAME on his head?

STURGE-WEBER SYNDROME (SWS)

The Sturge-Weber Syndrome (SWS) includes the following findings: Port Wine Stain (PWS or NEVUS FLAMMEUS) + EYE/TRIGEMINAL NERVE DISTRIBUTION + INTRACRANIAL VASCULAR MALFORMATION (look for with MRI) +/- glaucoma +/- Seizures +/- cognitive deficits.

**MNEMONICS:** “pWS = sWS”... Ever heard of a basketball player named Chris WEBBER? Think WEBBER = Sports = ESPN (I know it’s a stretch).

* EYE - glaucoma
* SWS
* PWS
* NEUROLOGIC issues: Developmental delay, Seizures

CAPILLARY MALFORMATION ASSOCIATIONS

(DOUBLE TAKE) KLIPPEL-TRENAUNAY SYNDROME

Klippel-Trenaunay syndrome is associated with AV fistulae, causing skeletal or limb OVERGROWTH (hemihypertrophy). Patients with Klippel-Trenaunay have Port Wine Stains and overgrowth of tissue, bones, and soft tissue. Look for unilateral limb overgrowth and CHF.

* **IMAGE:** www.pbrlinks.com/KLIPPELTRENAUNAY1
* **(DOUBLE TAKE) PEARL:** Hemihypertrophy images on the pediatric exam should very quickly clue you in to a few disorders. Highest on your differential should be Beckwith-Wiedemann Syndrome, then Klippel-Trenaunay, then Russell-Silver Syndrome, and then possibly Proteus Syndrome.

* **MNEMONIC:** From now on, say CRIPPLE-T. Think of these patients as having a CRIPPLING disorder in which they have one HUGE leg that prevents them from getting around.

* **NAME ALERT:** KLIPPEL-FEIL SYNDROME. This is a completely different disorder. Look for a Torticollis-like photograph (due to fused cervical vertebrae).

**IMAGE:** www.pbrlinks.com/KLIPPELTRENAUNAY2
(NAME ALERT) KLIPPEL-FEIL SYNDROME

Klippel-Feil Syndrome results in a torticollis-like appearance and results from fused cervical vertebrae. Patients will likely have a short, webbed neck, limited range of motion at the neck, and possibly other anomalies. Etiology is unknown. The “Name Alert” is because this is a completely different disorder from Klippel-Trenaunay Syndrome (limb overgrowth due to AV fistulae).

IMAGE: www.pbrlinks.com/CLIPPELFEIL1 (View images and move on!)

CONGENITAL MELANOCYTIC NEVUS

Congenital melanocytic nevi are commonly referred to as moles. They may present at birth or within the first few months of life. They are generally benign but carry an increased risk of MELANOMA if there are multiple moles (more than three) or if they are >20 cm. They are associated with spinal dysraphisms and Dandy Walker Syndrome (fossa abnormality).

MCCUNE-ALBRIGHT SYNDROME (AKA POLYOSTOTIC FIBROUS DYSPLASIA)

McCune-Albright syndrome (AKA Polyostotic Fibrous Dysplasia) findings include IRREGULAR café-au-lait MACULES (either >3 cm or multiple), PRECOCCIOUS PUBERTY, BONE PROBLEMS (fractures, cranial deformities), and possibly other endocrine issues (hyperthyroidism). It can cause fractures of long bones and bowing of arms.

IMAGE: www.pbrlinks.com/MCCUNE1

MNEMONIC: Call it MACULE Albright Syndrome from now on.

TUBEROUS SCLEROSIS

Tuberous sclerosis is AUTOSOMAL DOMINANT. Look for at least 2 of the following features:

* ASH LEAF SPOTS: These are hypOpigmented lesions, which can be seen with a Woods Lamp. You need at least 3 on the body to help make the diagnosis.
  - IMAGE: www.pbrlinks.com/TUBERSCLERO1
  - IMAGE: www.pbrlinks.com/TUBERSCLERO2

* SHAGREEN PATCH (hypoPigmented plaque that can be rough/thick and papular)
  - IMAGE: www.pbrlinks.com/TUBERSCLERO3
  - IMAGE: www.pbrlinks.com/TUBERSCLERO4

* ANGIOFIBROMAS (AKA ADENOMA SEBACEUM or SEBACEOUS HYPERPLASIA)
  - PEARL: Often misdiagnosed as acne. LOOK FOR SPARING OF THE FOREHEAD.
  - IMAGE: www.pbrlinks.com/TUBERSCLERO5

* PERIVENTRICULAR OR CORTICAL TUBERS: Usually associated with INFANTILE SPASMS or seizures

* CARDIAC Rhabdomyomas: Look for a kid with arrhythmias!

* RENAL ANGIOMYOLIPOMA

MANAGEMENT OF TUBEROUS SCLEROSIS: Most of the management has to do with seizures/infantile spasms and cardiac arrhythmias.

- MNEMONIC: Imagine a TUBULAR bazooka shooting out WHITE LEAVES. The leaves have DANCING (seizing) tics on them!
• **MNEMONIC:** ASH is typically GRAY/WHITE/HYPOPIGMENTED, whereas a “PATCH of GREEN” is typically DARKER/HYPERPIGMENTED.

• **MNEMONIC:** ASHES come from burned WOOD. A Woods lamp is needed to see them.

**NEUROFIBROMATOSIS I (NF1)**

Neurofibromatosis I (NF1) is an AUTOSOMAL DOMINANT disorder involving the SKIN, BONES, and NERVOUS SYSTEM. Diagnose with at least 2 of the following:

* First-degree relative has the disease
* Neurofibromas
* Lisch Nodules in the iris (they look like mini neurofibromas)

• **IMAGE:** [www.pbrlinks.com/NF1](http://www.pbrlinks.com/NF1)

* Optic nerve gliomas. This is the neurologic component.
* 6 REGULAR café-au-lait macules. As they get older, the SIZE DOES MATTER. If prepubertal, these are > 5 mm, if postpubertal, > 15 mm. Ten years of age is a good cutoff. These macules can be present at birth. Children can have an increase in the size and number as they age. Therefore, it is very important that they have regular follow-up, especially if there is a family history of the disorder. As a side note, children can also get pheochromocytomas or renal artery stenosis, so the BP should be monitored regularly.
* Scoliosis or bony abnormalities
* Axillary or inguinal freckling

* **MNEMONIC:** (FOR NF-1) SKIN + “ORTHO” + NEURO issues = S.O.N. This is NF ONE, SON (or daughter)!!!

**NEUROFIBROMATOSIS 2 (NF2)**

(Low-yield topic). Neurofibromatosis 2 (NF2) findings include nonmalignant tumors of the nervous system, especially acoustic nerve tumors (AKA neuromas or schwannomas). These can cause tinnitus or even hearing loss. Patients can also have eye tumors, cataracts, retinal problems, spinal cord tumors, and meningiomas. Look for a family history.

**PEARL:** Tuberous Sclerosis and Neurofibromatosis are both AUTOSOMAL DOMINANT, BUT they both have a HIGH RATE OF NEW MUTATIONS. Do not exclude these from your differential if they mention that the patient’s parents do not have the disorder.

**INCONTINENTIA PIGMENTI**

Incontinentia pigmenti is a severe X-linked DOMINANT disease that results in DEATH for all MALES before birth. If presented with this as an answer choice in a living patient, make sure the vignette refers to a FEMALE patient. There are four stages of this disorder. It starts with the inflammatory vesicular phase, followed by a verrucous phase, followed by the hyperpigmentation phase noted along the lines of Blaschko, and finally followed by a phase in which the hyperpigmentation disappears. This can leave atrophy or hypopigmentation behind.

**SYSTEMIC ASSOCIATIONS:** DELAYED DENTITION, intellectual disability, paralysis, PEG teeth, and seizures.

**IMAGE:** [www.pbrlinks.com/INCONTINENTIA1](http://www.pbrlinks.com/INCONTINENTIA1)
**IMAGE:** [www.pbrlinks.com/INCONTINENTIA2](http://www.pbrlinks.com/INCONTINENTIA2)
**IMAGE:** [www.pbrlinks.com/INCONTINENTIA3](http://www.pbrlinks.com/INCONTINENTIA3)
Mnemonic: As WOMEN age, they tend to have more “INCONTINENTs.” Incontinentia = Female patient. Imagine a WOMAN on the ground having a SEIZURE. She becomes INCONTINENT of urine, which streams down her PEG legs and creates black-and-white LINEAR SKIN LESIONS. PEG refers to PEG TEETH.

Hypohidrotic Ectodermal Dysplasia
Hypohidrotic ectodermal dysplasia is a condition related to INCONTINENTIA PIGMENTI, but this can occur in boys. It is associated with HYPOHIDROSIS, decreased sweating, which can lead to hyperthermia; HYPOTRICHOSIS, sparse hair, so no eyebrows/lashes; DELAYED TOOTH ERUPTION; and DEFORMED/PEG TEETH.

Infectious Skin Conditions

(Double Take) Ecthyma Gangrenosum
Ecthyma gangrenosum is usually a sign of a PSEUDOMONAS infection and possibly sepsis in an immunocompromised patient, especially LEUKEMIA! Look for a neutropenic patient with black, necrotic, ulcerative lesions with surrounding erythema and edema. These lesions are often located in the groin/diaper area.

STREPTOCOCCAL INFECTIONS OF THE GROIN
Streptococcal infections of the groin or perineum are associated with pain with stooling, pruritus, redness, and possibly a fissure. Unlike zinc deficiency, there is no desquamation. If vaginal or vulvovaginitis, look for a history of vaginal discharge. Diagnose by culturing the area. Treat with amoxicillin, penicillin (PCN), or a first generation cephalosporin. Risk factors include abuse and previous instrumentation. Look for a history of recent antibiotics in case the discharge is due to Candida.

(Double Take) Cutaneous Candidiasis, A Diaper Dermatitis
Cutaneous candidiasis, a diaper dermatitis, can occur secondary to a contact dermatitis or recent antibiotic use. It presents as a beefy red rash with papular satellite lesions. This rash goes into the inguinal folds. Use a KOH prep to confirm diagnosis, and treat with a topical antifungal, such as nystatin or clotrimazole.

Bullous Impetigo/STAPH SCALDED SKIN SYNDROME (SSSS)
Bullous impetigo, or Staph Scalded Skin Syndrome (SSSS), is a spectrum of the same disease.

* IMPETIGO: Look for honey-colored crusting lesions and bullae. Non-bullous impetigo will look similar but without vesicle/bullae (more oozing/crusting).
  - IMAGE: www.pbrlinks.com/SSSS1
  - IMAGE: www.pbrlinks.com/SSSS2
  - IMAGE: www.pbrlinks.com/SSSS3

* SSSS: A very painful and red rash in which large, thin blisters are the result of an exotoxin. There is “sheet-like” skin loss/separation. This looks very superficial compared to impetigo. Obtain a BIOPSY to prove that
it is SSSS and NOT Stevens-Johnson Syndrome (SJS) or Toxic Epidermal Necrolysis (TEN), both of which have deeper/dermal involvement.

- **IMAGE**: www.pbrlinks.com/SSSS2
- **PEARL**: Lesions are **NOT** in the eyes or mouth but may be **around** the eyes and mouth (as opposed to SJS/TEN, which may be IN the eyes and mouth).

**STAPHYLOCOCCUS EPIDERMIS**

Staphylococcus epidermis is the most likely answer if you are presented with a premature baby that has a skin infection.

**CELLULITIS**

Cellulitis is defined as a well-demarcated area of erythema, edema, and induration secondary to an infection. It may be associated with bullae. For treatment, start with a 1st generation cephalosporin such as Cefazolin or Cephalexin as your first line agent.

**TINEA CORPORIS**

In tinea corporis, a thin, circular lesion with a RAISED border, CENTRAL CLEARING and a LEADING EDGE (scale at the leading/expanding border) is noted. The ring of the “ringworm” looks like a worm. Treat with antifungal creams such as clotrimazole, ketoconazole, terbinafine, or luliconazole.

**TINEA VERSICOLOR (AKA PITYRIASIS VERSICOLOR)**

Tinea versicolor results in hypopigmented OR hyperpigmented macules. It’s caused by MALASSEZIA FURFUR. Lesions may fluoresce under Woods lamp. Treat with topical selenium sulfide lotion/shampoo (1-2.5%) or zinc pyrithione 1% shampoo. Second line treatment includes oral itraconazole or fluconazole, but NOT oral griseofulvin (use that for T. capitis).

**PITYRIASIS ROSEA**

Pityriasis rosea presents as oval, parallel lesions with THICK scales. Look for a herald patch (first lesion). It is associated with winter and spring. Lesions are often in a “Christmas tree pattern.” Treat with light exposure.

**MOLLUSCUM CONTAGIOSUM**

Molluscum contagiosum results in flesh-colored, pearly papules that are dome-shaped and **umbilicated**. It is caused by the POX virus. NO treatment is needed, but sometimes you may use cryotherapy or topical cantharidin, podophyllotoxin, imiquimod, or potassium hydroxide.

**IMAGE**: www.pbrlinks.com/PITYRIASIS1
**IMAGE**: www.pbrlinks.com/PITYRIASIS2
**PEARL**: Unlike secondary syphilis, there are no lesions on the palms/soles.
**MNEMONIC:**

molluscUMbilicated Papules

**(DOUBLE TAKE) HUMAN PAPILLOMA VIRUS (HPV)**

Human papilloma virus (HPV) causes VERRUCA VULGARIS (warts). They can be on the hands, knees, and feet, and in the anogenital region. If genital, the condition is referred to as CONDYLOMA ACUMINATA. Genital human papilloma virus is considered to be an STD. In fact, HPV is considered the most prevalent STD of all. Only a small percentage of patients carrying HPV develop warts. More than 90% of infections are from HPV 6 or HPV 11, which are NOT likely to induce cervical cancer. The risk of cervical cancer is **increased** depending on the subtype *(16 and 18 are most commonly associated with cervical cancer)*. Anogenital warts can be due to maternal-fetal transmission and may not present until 3 years after birth! BUT if you note anogenital warts **AFTER** 3 years of age, think SEXUAL ABUSE. Lesions are NOT tender but easily bleed with minimal trauma. Treat with self-applied topical podophyllotoxin or imiquimod. Treatment with cryotherapy or podophyllin is done by a physician.

**PEARL:** Cervical cytology (Pap test) is not recommended until 21 years of age for an average-risk asymptomatic woman.

**IMAGE:** www.pbrlinks.com/HPV1 (Acuminata)
**IMAGE:** www.pbrlinks.com/HPV2

**MNEMONIC:** Don’t get confused with molluscum. hpV = VVarts/Warts = Verruca Vulgaris = Venereal VVarts/Warts. “VVarts on your hands or knees? It’s probably from those darn V’s!”

**MNEMONIC:** The HPV 16 & HPV 18 strains are the two you should remember (associated with the highest risk of cervical cancer): Imagine an adolescent couple. Their birthdays are on the same day, 7/1 (Zodiac of CANCER). The boy is turning 18, and he’s excited to finally VOTE. His girlfriend is turning 16, and she’s excited because she’ll finally get her DRIVER’S LICENSE now that she’s celebrating her SWEET SIXTEENTH. As they go to blow out the BIRTHDAY CAKE candles, you notice that she has VVarts on her lips! It turns out he also has VVarts, but his are Venereal (anogenital).

**NAME ALERT:** An “A” in Acuminata looks like a flipped “V,” which may help you remember that a diagnosis of Condyloma Acuminata represents an hpV infection. The “L” in Condyloma Lata should remind you that you are dealing with syphiLis.

**CONDYLOMA LATA**

Condyloma lata is found in secondary syphiLis = White-gray, coalescing papules. These appear much more FLAT than Condyloma Acuminata.

**IMAGE:** www.pbrlinks.com/CONDYLOMA1

**NAME ALERT:** An “A” in Acuminata looks like a flipped “V,” which may help you remember that a diagnosis of Condyloma Acuminata represents an hpV infection. The “L” in Condyloma Lata should remind you that you are dealing with syphiLis.

**HERPES SIMPLEX VIRUSES 1 & 2 (HSV 1 & 2)**

Herpes simplex viruses 1 and 2 are similar. HSV-2 is usually an STD usually affecting the genitals, while HSV-1 most commonly affects the mouth (gingivostomatitis) but can appear in other sites as well.
Initial infections are often asymptomatic but can be relatively severe with very painful lesions, fever, and lymphadenopathy. Look for multiple painful ulcers or vesicles on the labia or penis (HSV-2) or in and around the mouth (HSV-1). The vesicles are clustered on an erythematous base. Lesions can also be ulcerative. Diagnose by obtaining HSV PCR or a viral culture. The Tzanck smear is not specific for HSV. Treat with oral Acyclovir x 7 days (not topical). Treat babies with IV Acyclovir.

HSV becomes latent after the primary infection and can reactivate later. Recurrent infections tend to be less severe and of shorter duration than primary ones. Pain often precedes the appearance of lesions. Patients do shed virus during secondary infections.

**IMAGE:** www.pbrlinks.com/HSVII1

**PEARL:** HSV-1 can be associated with a very painful infection called a HERPETIC WHITLOW (typically of a thumb or finger).

**IMAGE:** www.pbrlinks.com/HSVII2

**HERPES SIMPLEX VIRUS ENCEPHALITIS (HSV ENCEPHALITIS)**

A question about herpes simplex virus encephalitis (HSV encephalitis) would likely mention fever, seizures, and possibly a CT finding in the temporal lobe. Treatment is STAT IV acyclovir, followed by a lumbar puncture to obtain fluid for PCR testing. An EEG might show PLEDs (periodic lateralizing epileptiform discharges).

**DOUBLE TAKE** HERPES SIMPLEX VIRUS GINGIVOSTOMATITIS

Herpes simplex virus gingivostomatitis presents with oral and perioral/vermillion border lesions/vesicles. Gingiva is friable and malodorous. There is associated lymphadenopathy. Usually caused by HSV-1. Can treat with oral acyclovir, but there is limited data supporting this in children. Treat immunocompromised hosts with IV acyclovir.

**IMAGE:** www.pbrlinks.com/HSVSTOMATITIS1

**ECZEMA HERPETICUM**

Eczema herpeticum is a potentially life-threatening disseminated herpes (HSV) infection occurring at sites of skin damage, including sites of eczema. Look for HSV vesicles + crusted lesions. Even if a description is not given of a vesicular rash, have a high index of suspicion for a rash “not improving with steroids and/or antibiotics.” Diagnose with HSV PCR or a viral culture, but do not delay treatment. A Tzanck smear can support the diagnosis. Treat by STOPPING topical steroids and/or immunosuppressants and starting Acyclovir.

**IMAGE:** www.pbrlinks.com/ECZEMAHERPETICUM1
**IMAGE:** www.pbrlinks.com/ECZEMAHERPETICUM2
**IMAGE:** www.pbrlinks.com/ECZEMAHERPETICUM3

**BLUEBERRY MUFFIN RASH DIFFERENTIAL DIAGNOSIS**

Blueberry muffin rash represents extramedullary hematopoiesis. Differential diagnosis for blueberry muffin rash includes TORCH infections (including syphilis), hematologic disorders (hereditary spherocytosis, hematologic disease of the newborn, twin-to-twin transfusion), vascular disorders (like multiple hemangiomas) and malignancies (neuroblastoma, congenital rhabdomyosarcoma, Langerhans cell histiocytosis, congenital leukemia cutis).
SCABIES
Scabies presents as linear, papular, erythematous, pruritic, vesicular, and crusting lesions most often seen in areas with CREASES (wrist, groin, webbing of fingers). You may see burrows. Treat the entire family with permethrin overnight (8-14 hours) from neck to toe and wash off the next morning for the entire family. Re-treat the patient 7-10 days later because eggs can hatch up to 10 days later. Try topical steroids or antihistamines for symptomatic cares in the interim. An alternative treatment is oral ivermectin due to ease of administration in older children.

PEARL: Unlike papular urticaria, lesions are not in crops.

IMAGE: www.pbrlinks.com/SCABIES1

PEDICULOSIS CAPITIS (AKA HEAD LICE)
Pediculosis capitis (AKA head lice) results in nits/ova of the lice at the hair shafts, especially in the occipital area. Treat with permethrin. The patient may have more symptoms at night when lice tend to be more active. Itching is from the bites. Similar to scabies, repeat permethrin again in 7–10 days because eggs can hatch up to 10 days later. Oral ivermectin is also a possible treatment, especially if the lice are found to be resistant to the topical treatments.

PEARL: African American children are much less likely to get head lice per the CDC. So think twice about selecting head lice in the answer for board questions that include an African American child.

IMAGE: www.pbrlinks.com/HEADLICE1

PEDICULOSIS PUBIS (AKA PUBIC LICE or CRABS)
Pediculosis pubis (AKA pubic lice or crabs) is an infection in the groin that results in red, crusted suprapubic macules and possibly bluish-gray dots. There is a STRONG ASSOCIATION with sexual abuse in children.

IMAGE: www.pbrlinks.com/CRABS1

THE “ERYTHEMA” RASHES

ERYTHEMA NODOSUM
For erythema nodosum, look for PAINFUL, shiny, red to bluish skin lesions in a patient with a history of a chronic disease or on certain medications. Associations include Crohn’s Disease, Ulcerative Colitis, Drugs (oral contraceptives and sulfa drugs), Infections (Yersinia, EBV, Tuberculosis, fungal infections), and Sarcoidosis.

MNEMONIC: For this shiny skin finding, use CUDIS (kind of like CUTIS, which means skin) to help you remember the following associations: Crohn’s, UC, Drugs, Infections, and Sarcoidosis.

IMAGE: www.pbrlinks.com/ERYTHEMA-N1
IMAGE: www.pbrlinks.com/ERYTHEMA-N2
IMAGE: www.pbrlinks.com/ERYTHEMA-N3

(DOUBLE TAKE) ERYTHEMA CHRONICUM MIGRANS
Erythema chronicum migrans (AKA erythema migrans) is caused by BORRELIA BURGDORFERI, the spirochete that causes LYME DISEASE. Look for a large, flat lesion (> 5 cm) that is annular and has a red border. It is located at the tick bite site in about 75% of patients. The classic description is a “bulls eye” lesion. The rash shows up 1–2 weeks after the bite. Titers may still be negative during this period. Borrelia is transmitted via the Ixodes deer tick. IF the patient has an acute arthritis, disseminated erythema migrans, a palsy (BELL’S PALSY), or neuropathy, then treat with ORAL medication (doxycycline if >8 years old,
penicillin or amoxicillin if < 8 years old). If the patient has CARDITIS, neuritis (encephalitis/meningitis), or RECURRENT arthritis, treat with INTRAVENOUS medication (PCN or ceftriaxone). Arthritis is usually located at the large joints (especially the knees). Diagnosing using labs is often difficult. Obtain Lyme antibody titers. If these are positive, confirm with a Western blot. Lyme Disease is often a clinical diagnosis (for example, if you see erythema migrans, TREAT).

* IMAGE: (BULLSEYE LESION) www.pbrlinks.com/ERYTHEMA-C1

* IMAGE: (BELL’S PALSY) www.pbrlinks.com/ERYTHEMA-C2

* SIDE NOTES

- BELL’S PALSY: Unilateral facial nerve paralysis (CN VII). It is often idiopathic.
- The Jarisch-Herxheimer reaction results in fever, chills, hypotension, headache, myalgia, and exacerbation of skin lesions during antibiotic treatment of a bacterial disease (typically spirochetes). This is due to large quantities of toxins released into the body. It is classically associated with syphilis but can also occur with Lyme disease. It may only last a few hours.

* MNEMONICS:

- From now on, think/say borreLIYME. “Don’t ever throw a borreLIYME to MY GRANny!” Or, “Don’t ever borre-LIE to MY GRANny.” borreLIYME = Borrelia. MY GRANny = Migrans.
- Imagine that BULL’S EYES are made of two bright neon-green LIMES! This should remind of you of the classic description.
- Imagine squeezing LYME into a CAN = Carditis, Arthritis, and Neuritis.

(DOUBLE TAKE) ERYTHEMA MARGINATUM

- Erythema marginatum is a transient, erythematous, macular and light colored. It is described as being “SERPENTiginous” (snakelike) and the MARGIms are noted progress as the center clears. It is part of the Jones criteria for Rheumatic Fever.
- IMAGE: www.pbrlinks.com/ERYTHEMA1

MNEMONIC: The E in Erythema is part of the E in jonEs, and the name MARGIms should remind you to look for an interesting description of the rash’s MARGIms. Erythema MARGIatum.

(DOUBLE TAKE) ERYTHEMA INFECTIOSUM

Erythema infectiosum IS an INFECTIOUS rash!!! It is caused by Parvovirus B19. It is also called Fifth Disease. Look for erythematous facial flushing of the cheeks (sometimes described as “slapped cheeks” appearance). The extremities will have diffuse macular (or morbilliform) erythema (especially on the extensor surfaces) referred to as “lacy” or “reticular.” Diagnose with IgM titers. (There is no culture or rapid antigen available.)

PEARLS: The rash occurs AFTER the slapped cheeks rash (often a week later). Patients may also have knee or ankle pain. Parvovirus B19 infection can result in APLASTIC CRISIS. Intrauterine exposure can result in hydrops fetalis.

MNEMONIC: infectio5uM = FIFTH disease = “Five fingers.” Imagine a cheek being SLAPPED with FIVE fingers covered by a white LACY glove with a red M on the back of it (extensor surface). M = IgM titers.

MNEMONIC: ParVoVirus B19: From now on, say/think “parVoVirus V19.” V = Roman numeral 5!

ERYTHEMA TOXICUM NEONATORUM

See in next section (Newborn Rashes).
ERYTHEMA MULTIFORME
See the Stevens-Johnson syndrome section for more information on erythema multiforme. Look for target lesions.

THE NEWBORN RASHES

MILIARIA RUBRA
Look for very superficial vesicles that are easily ruptured in a case of miliaria rubra. This occurs due to obstruction of sweat glands and is also called "prickly heat rash."

**IMAGE**: www.pbrlinks.com/MILIARIA1

**MNEMONIC**: Miliaria sounds like malaria, which is usually found in hot countries where you sweat!

MILIA
Milia are small, pearly inclusion cysts that look like little white heads. There’s NO associated erythema. If milia are on the nose, they can be very easy to confuse with SEBACEOUS HYPERPLASIA.

**IMAGE**: www.pbrlinks.com/MILIA1
**IMAGE**: www.pbrlinks.com/MILIA2

SEBACEOUS HYPERPLASIA
In sebaceous hyperplasia, pinpoint white-yellow papules appear on the nose and central face. There is NO associated erythema. It results due to maternal androgen exposure and is benign.

**IMAGE**: www.pbrlinks.com/SEBACEOUSHYPERPLASIA1
**IMAGE**: www.pbrlinks.com/SEBACEOUSHYPERPLASIA2

ERYTHEMA TOXICUM NEONATORUM
Erythema toxicum neonatorum is seen in up to 50% of newborns and consists of erythematous macules with raised central lesions (papules or vesicles). This is usually seen at birth or by DOL 2. It is a benign rash with an unknown etiology. It usually disappears by DOL 7. Diagnose by noting eosinophils on microscopy.

**IMAGE**: www.pbrlinks.com/ERYTHEMA-T1

**MNEMONIC**: Although the name “TOXICum” suggests otherwise, this is a NON-toxic rash resulting in non-toxic looking babies.

**MNEMONIC**: This is an Early, Erythematous, "Eosinophilled" rash called Erythema toxEEEcum.

TRANSIENT NEONATAL PUSTULAR MELANOSIS
Transient neonatal pustular melanosis is more common in African-American kids. This is a benign rash with NO associated erythema. It starts in utero and is PRESENT AT BIRTH. It resolves within a few days but can leave hyperpigmented macules for a while. Diagnose by examining contents and looking for PMNs on Tzanck smear.

**IMAGE**: www.pbrlinks.com/TRANSIENT1
**IMAGE**: www.pbrlinks.com/TRANSIENT2

**MNEMONICS**: Transient neonatal PUStular melanosis should remind you of the PMNs on the Tzanck smear in the PUS-like contents of these PUStules. MELANosis should make you think about dark-skinned individuals (AA kids) and the dark macules that can be left behind.
NEONATAL ACNE (AKA NEONATAL CEPHALIC PUSTULOSIS)

Neonatal acne (AKA Neonatal Cephalic Pustulosis) occurs within the first month of life and resolves by 4 months of age. Look for inflammatory pustules on the cheeks and forehead without comedones. This is a benign rash that requires no treatment.

**IMAGE**: www.pbrlinks.com/NCP1

**MNEMONIC**: NEONATal = FIRST MONTH OF LIFE!

INFANTILE ACNE

Infantile acne looks like typical pubertal acne, but it is found in babies. Onset is usually around 2–3 months of age, and it is due to androgenic stimulation. There can be COMEDONES (whiteheads and blackheads). The rash can resolve in a few weeks or it can take up to a year to resolve.

**MNEMONIC**: INFANTile = Infants. Don’t choose this if the baby is 4 weeks old.

**IMAGE**: www.pbrlinks.com/INFANTILE1

LIVEDO RETICULARIS (AKA CUTIS MARMORATA)

Livedo reticularis (AKA cutis marmorata) presents as a mottled, reticulate patterned rash and may be described as a lacy rash. It is benign and resolves by 1 month.

**IMAGE**: www.pbrlinks.com/LIVEDO1
**IMAGE**: www.pbrlinks.com/LIVEDO2

**PEARL**: If the baby is healthy and without any concerning symptoms, choose this. If not, consider sepsis in your differential.

ALOPECIA & HAIR FINDINGS

ALOPECIA AREATA

In alopecia areata, there are round/well-circumscribed area(s) of alopecia. Alopecia can be on the scalp or in other areas. Hairs at the periphery of the areas are short, pluckable, and may resemble an exclamation point!

**IMAGE**: www.pbrlinks.com/ALOPECIA-A1
**IMAGE**: www.pbrlinks.com/ALOPECIA-A2
**IMAGE**: www.pbrlinks.com/ALOPECIA-A3

ALOPECIA TOTALIS

Alopecia totalis is the loss of all hair on the HEAD.

**IMAGE**: www.pbrlinks.com/ALOPECIA-T1

ALOPECIA UNIVERSALIS

Alopecia universalis is the loss of all hair on the entire BODY. There is usually a SYSTEMIC etiology such as hypothyroidism, a nutritional deficiency, or even lupus (SLE).

(DOUBLE TAKE) ZINC DEFICIENCY

Breastfeeding helps with zinc absorption. If a child begins having medical problems once weaned from breast milk, consider zinc deficiency in your differential. Zinc deficiency causes a SCALY and EXTREMELY ERYTHEMATOUS dermatitis in the perioral and perianal area (around the natural orifices) that can DESQUAMATE. The rash is sometimes described as erosive and eczematous. It can also be associated with ALOPECIA and poor taste.
* **MNEMONIC:** Poor taste, huh? Have you ever had Zinc lozenges? They are disgusting! It’s probably a good thing that you have hypogeusia when you are eating Zinc lozenges!

* **IMAGE:** www.pbrlinks.com/ZINC1
* **IMAGE:** www.pbrlinks.com/ZINC2
* **IMAGE:** www.pbrlinks.com/ZINC3
* **IMAGE:** www.pbrlinks.com/ZINC4

* **PEARLS:**
  
  - **CROHN’S DISEASE:** If a Crohn’s patient is suffering from diarrhea, they may have zinc deficiency since Zn is lost in the stool.
  
  - (DOUBLE TAKE) **STRIGHT VEGETARIANS AND VEGANS** may be susceptible to multiple nutritional deficiencies, including deficiencies in IRON, ZINC, CALCIUM, and VITAMIN B12. Vegans avoid all animal-derived products (including milk and eggs). B12 deficiency can result in megaloblastic anemia, vitiligo, peripheral neuropathy, and even regression of milestones.
    
    - **MNEMONIC:** Did you know giraffes are vegetarian? Imagine a giraffe standing in Times Square reaching its long neck into the sunroof of a FUZZY CAB that has green, grass-like seats and fuzzy floor mats. FUZZY CAB = FeZi CaB12!

* **(DOUBLE TAKE) ACRODERMATITIS ENTEROPATHICA**
  
  Acrodermatitis enteropathica is an inherited condition (autosomal recessive) in which there is a zinc transport defect. It can result in alopecia, diarrhea, failure to thrive (FTT), and the rash of zinc deficiency.

  **IMAGE:** www.pbrlinks.com/ACRODERMATITIS1

* **(DOUBLE TAKE) BIOTIN/BIOTINIDASE DEFICIENCY**
  
  Biotin and biotinidase deficiencies may present with a RASH + ALOPECIA + NEUROLOGIC SIGNS (ataxia, coma, etc.). Patients may also have lactic acidosis. Treat with biotin.

  **MNEMONIC:** Imagine the bio-TIN MAN from The Wizard of Oz walking with an ATAXIC gait as he SCRATCHES his bare arm (NO HAIR)! Also, think of biotin as bio7in to remember that this is vitamin B7.

* **TELOGEN EFFLUVIUM**
  
  Telogen effluvium is a form of acute hair shedding that occurs diffusely. Instead of patches, you see “thinning” of the hair. The hair that is shed can be recognized by a small bulb of keratin on the root end. It was too young to shed. This is often related to a psychological or medical stressor. Treat with REASSURANCE because the hair will grow back.

  **IMAGE:** www.pbrlinks.com/TELOGEN1
  **IMAGE:** www.pbrlinks.com/TELOGEN2

* **TINEA CAPITIS (AKA RINGWORM)**
  
  Tinea capitis (ringworm) results in broken hair that looks like “black dot alopecia.” There is often inflammation, and this condition can be associated with a kerion (a raised spongy lesion). Treat with GRISEOFULVIN. You do not need any baseline labs.

  **IMAGE:** www.pbrlinks.com/TINEACAPITIS1
  **IMAGE:** www.pbrlinks.com/TINEACAPITIS2
TRICHTILLROMANIA

Trichotillomania is a body-focused repetitive behavior in which patients pull out their hair. (This may be on a location other than the scalp.) Look for loss of hair in an irregular pattern (not a nice circle). Also, the irregularly shaped patches will contain incomplete hair loss in which you will see hair of differing lengths.

IMAGE: www.pbrlinks.com/TRICHTILLOMANIA1
IMAGE: www.pbrlinks.com/TRICHTILLOMANIA2

(DOUBLE TAKE) ESSENTIAL FATTY ACID DEFICIENCIES

Essential fatty acids include LINOLEIC ACID and alpha-linolenic acid. Deficiency results in alopecia, a scaly dermatitis, and thrombocytopenia. Treat with IV lipids.

MNEMONIC: Imagine a fish whose red SCALES are shaped like HAIRY PLATELETS. As the fish struggles to find food, it becomes SKINNIER and skinnier (m`nourished) and the hairy platelets begin to fall off. What’s left is a SKINNY (fat-free), BALD, and THROMBOCYTOPENIC fish!

APLASIA CUTIS CONGENITA

In aplasia cutis congenita, there is a congenital absence of the skin in an area. It is usually in a single location (most often the scalp) but can be in multiple areas. After the lesion heals and scars, a BALD SPOT is left behind. Aplasia cutis can be associated with underlying spinal dysraphisms and underlying skull defects.

IMAGE: www.pbrlinks.com/APLASIACUTIS1
IMAGE: www.pbrlinks.com/APLASIACUTIS2

PEARLS: Look for the HAIR COLLAR SIGN. This is a hairless area with a collar of dense hair at the edges. If given a picture of a scalp with the hair collar sign, get an MRI.

IMAGE: www.pbrlinks.com/APLASIACUTIS3
I really hope that you've enjoyed this free content. Any included links are active to show you how valuable an online learning experience can be. My sincere recommendation is that you purchase a MULTIMODAL PBR bundle that includes hardcopy AND digital content. Mark up the hardcopy content and use the digital content (i.e., audio course, video course, picture atlas, etc.) to accelerate repetition and reinforcement so you can be EFFICIENT!

Now... how about a handful of free questions?

Scroll to the next page to get a sample of the PBR Questions & Answers.
QUESTIONS

1. A premature baby needs:
   a. More sodium than a full term neonate. Sodium supplementation should be started immediately.
   b. More sodium than a full term neonate. Sodium supplementation can be started after 24 hours.
   c. Less sodium than a full term baby.
   d. The same amount of sodium as a full-term baby.

2. A premie is born at 33 weeks in a taxi. In the ER, the baby is noted to have a temperature of 35 degrees Celsius. The child should be placed:
   a. In a bassinette.
   b. In an incubator at 40 degrees Celsius.
   c. Under a radiant warmer at max temperature.
   d. Under a radiant warmer at preferred skin temperature.

3. An LGA baby is noted to have a firm, freely mobile, erythematous and nodular mass with distinct borders at the upper cheek on DOL 13. This is likely:
   a. Fat necrosis of the newborn.
   b. A lipoma
   c. A sarcoma
   d. Related to child abuse.

4. Which abnormality is common in the recipient of a PRBC transfusion and also in the recipient twin of a twin-to-twin transfusion?
   a. Hyponatremia
   b. Hypokalemia
   c. Hypocalcemia
   d. Hypophosphatemia

5. A child is born by a normal vaginal delivery. About an hour later he is noted to be tachypneic and pale. Labs show that he is anemic. Reticulocyte count is 15%. The RBCs are noted to be normal under microscopy. What is the likely etiology of these finding?
   a. Chronic intrauterine blood loss.
   b. Acute blood loss at birth.
   c. Congenital heart disease.
   d. Congenital syphilis
ANSWERS?

WHERE ARE THE ANSWERS?
These are real questions from the PBR Q&A Book. Please enroll into a PBR membership and access the answers by visiting:
https://www.pediatricsboardreview.com/pediatric-initial-certification

FREE QUESTIONS AND ANSWERS

GET PERSONALIZED HELP TO PASS THE BOARDS
If you’ve ever failed ANY medical board exam before, OR if you are usually just above the passing grade, you absolutely MUST consider the possibility that you may need a little extra help to pass the pediatric boards. It’s one of the hardest medical board exams around, and I’d strongly recommend that you read the following article that I wrote to see if coaching is right for you:
http://www.pediatricsboardreview.com/coach

IF YOU ENJOYED IT, GET IT!

Still not sure where to get started? Buy the PBR FOR LIFE! and you’ll have everything you need to study, an amazing group of pediatricians to lean on, exclusive discounts, and LIFETIME access to PBR’s online materials. Click below to join us:
http://www.pediatricsboardreview.com/catalog

Best,
- Ashish
Hope You’ve Enjoyed It!

A Few [CRITICAL] Reminders

ARE YOU TAKING THE INITIAL CERTIFICATION EXAM? TAKE THE RISK CALCULATOR!

This exam is MUCH HARDER than the USMLE exam. In order to understand how many time you should go through the material, and in order to understand HOW to go through the material, you go through the PBR RISK CALCULATOR now and find out if you are at low, moderate or high risk of failing the exam. Then you’ll know if you should go through the PBR Core Study Guide and the Q&A Book a minimum of 3 times or 5 times. For low-risk test-takers, AT LEAST 3 rounds of the material is recommended. For high-risk test-takers, AT LEAST 5 rounds of the material is recommended AND a strong focus on test-taking strategy. Your risk profile depends on many factors (exam history, scores on in-training exams, your residency program, and more). Visit www.pbrlinks.com/RISK-CALCULATOR and go through the PBR RISK CALCULATOR now.

ARE YOU GOING THROUGH MOCA-PEDS?

MOCA-Peds participants do NOT need the PBR Core Study Guide or the PBR Q&A Book. Instead, you need the (super cheap) MOCA-PBR Study Guide & Test Companion to help you quickly and EFFICIENTLY run through this year’s 45 Learning Objectives and 4 Featured Readings. Then you can also use the MOCA-PBR as a “test-companion” on your “open book” and “open computer” MOCA-Peds questions. It’s kind of amazing.

Visit www.pediatricsboardreview.com/MOCA-PBR and Learn More Now

ARE YOU TAKING THE TRADITIONAL, 4-HOUR MOC EXAM?

Going through the PBR Core Study Guide and Q&A Book 2 times should be PLENTY. The pass rate for the PBR has historically 100% for multiple years in a row for practicing general pediatricians. The most common feedback is along the lines of, “Ashish! I only read it once... and I passed!”

“LOW-ISH” USMLE SCORES? FAILED A BOARD EXAM? WORK ON TECHNIQUE!

Seriously, seriously, SERIOUSLY! This exam can wreak havoc and chaos in you life. The techniques that are taught in PBR’S Test-Taking Strategies & Coaching courses have helped pediatricians finally pass the boards after they had failed MULTIPLE times. Learn the “board game” by understanding question-answering STRATEGIES. Start seeing an increase in your practice exam scores IMMEDIATELY. PBR has helped pediatricians pass after they had failed 7 times! So helping YOU should be easy. Don’t have regrets. Visit the link below now and learn more about our self-paced and LIVE Test-Taking Strategies Courses. And if you’re a high-risk test-taker, PLEASE consider signing up for the VIP BUNDLE.

www.pediatricsboardreview.com/technique
**DON’T FORGET TO DO TONS OF BOARD REVIEW QUESTIONS... FOR PRACTICE!**

Do at least 1000 practice questions if you’re studying for the ABP initial certification boards, and at least 300 if you’re taking the ABP MOC recertification exam. The first choice is the AAP PREP® series of questions, but PBR also has trusted affiliate relationships with other great companies that give you MASSIVE discounts on questions to use for PRACTICE! Just visit [www.pediatricsboardreview.com/tools](http://www.pediatricsboardreview.com/tools) for member discounts.

**MAXIMIZE YOUR LEARNING OPPORTUNITIES & MODALITIES!**

PBR helps you study **EFFICIENTLY**. It’s an entire SYSTEM that BUILDS on itself to give you the highest chance of passing your board exam. **REPETITION and MULTIMODAL** studying have both been proven to increase learning. The videos, the MP3s, and the summertime live webinars will help you **maximize your time and learning**! Visit [www.pediatricsboardreview.com](http://www.pediatricsboardreview.com) now and find the right PBR resource to help you maximize your learning efficiently (MP3s, Video Course, Webinars, Pediatric Atlas...).

**Can’t Decide What To Use Next? You Don’t Have To!**

PBR is now offering a discounted bundle that includes ALL OF OUR BOARD REVIEW products for over 50% off. This should remove the mental obstacles of money and finances that sometimes causes pediatricians to fail. The package is called the **PBR No Brainer**, and it includes a video course, an audio course, live (and recorded) webinars, an online digital picture atlas, our hardcopy Core Study Guide, our hardcopy Q&A Book, our Full Online Test-Taking Strategies Course and even a Personalized Study Schedule created just for you!

Visit the Link Below and Learn More About the **No Brainer** Enrollment & Upgrade Opportunities
